Self-study Guide to Analysis and Design of Information Systems 2004-10 this book is the result of a group of researchers from different disciplines asking themselves one question what does it take to develop a computer interface that listens talks and can answer questions in a domain first obviously it takes specialized modules for speech recognition and synthesis human interaction management dialogue input fusion and multimodal output fusion basic question understanding and answer finding while all modules are researched as independent subfields this book describes the development of state of the art modules and their integration into a single working application capable of answering medical encyclopedic questions such as how long is a person with measles contagious or how can i prevent rsi the contributions in this book which grew out of the imix project funded by the netherlands organisation for scientific research document the development of this system but also address more general issues in natural language processing such as the development of multidimensional dialogue systems the acquisition of taxonomic knowledge from text answer fusion sequence processing for domain specific entity recognition and syntactic parsing for question answering together they offer an overview of the most important findings and lessons learned in the scope of the imix project making the book of interest to both academic and commercial developers of human machine interaction systems in dutch or any other language highlights include integrating multi modal input fusion in dialogue management van schooten and op den akker state of the art approaches to the extraction of term variants van der plas tiedemann and fahmi tjong kim sang hofmann and de rijke and multi modal answer fusion two chapters by van hooijdonk bosma krahmer maes theune and marsi watch the imix movie at nwo.nl/imix/film/like-ibm-s-watson-the-imix-system described in the book gives naturally phrased responses to naturally posed questions where watson can only generate synthetic speech the imix system also recognizes speech on the other hand watson is able to win a television quiz while the imix system is domain specific answering only to medical questions the netherlands has always been one of the leaders in the general field of human language technology and imix is no exception it was a very ambitious program with a remarkably successful performance leading to interesting results the teams covered a remarkable amount of territory in the general sphere of multimodal question answering and information delivery question answering information extraction and component technologies eduard hovy usc usa jon oberlander university of edinburgh scotland and norbert reithinger dfki germany

PowerPoint 97 1998-01-05 these are exciting times in the fields of fuzzy logic and the semantic and this book will add to the excitement as it is the first volume to focus on the growing connections between these two fields this book is expected to be a valuable aid to anyone considering the application of fuzzy logic to the semantic because it contains a number of detailed accounts of these combined fields written by leading authors in several countries the fuzzy logic field has been

maturing for forty years these years have witnessed a tremendous growth in the number and variety of applications with a real world impact across a wide variety of domains with humanlike behavior and reasoning and we believe that in the coming years the semantic will be major field of applications of fuzzy logic this book the first in the new series capturing intelligence shows the positive role fuzzy logic and more generally soft computing can play in the development of the semantic filling a gap and facing a new challenge it covers concepts tools techniques and applications exhibiting the usefulness and the necessity for using fuzzy logic in the semantic it finally opens the road to new systems with a high iq most of today s content is suitable for human consumption the semantic is presented as an extension of the current web in which information is given well defined meaning better enabling computers and people to work in cooperation for example within the semantic computers will understand the meaning of semantic data on a web page by following links to specified ontologies but while the semantic vision and research attracts attention as long as it will be used two valued based logical methods no progress will be expected in handling ill structured uncertain or imprecise information encountered in real world knowledge fuzzy logic and associated concepts and techniques more generally soft computing has certainly a positive role to play in the development of the semantic fuzzy logic will not supposed to be the basis for the semantic but its related concepts and techniques will certainly reinforce the systems classically developed within w3c in fact fuzzy logic cannot be ignored in order to bridge the gap between human understandable soft logic and machine readable hard logic none of the usual logical requirements can be guaranteed there is no centrally defined format for data no guarantee of truth for assertions made no guarantee of consistency to support these arguments this book shows how components of the semantic like xml rdf description logics conceptual graphs ontologies can be covered with in each case a fuzzy logic focus first volume to focus on the growing connections between fuzzy logic and the semantic keynote chapter by lotfi zadeh the semantic is presently expected to be a major field of applications of fuzzy logic it fills a gap and faces a new challenge in the development of the semantic it opens the road to new systems with a high iq contributed chapters by fuzzy logic leading experts
