on solving word problems is the key to it this set of books teaches you the techniques and strategies you need to solve word problems sample question in this volume mr coach spent a total of 240 00 for 6 soccer balls if one basketball cost 13 00 more than one soccer how much did he pay for 12 basketballs reasoning and solution to find how much he paid for 12 basketballs we need to first know how much one basketball cost to know how much one basketball cost we need to know how much one soccer ball cost

first 6 soccer balls cost 240 00 each of the 6 soccer balls costs the same so we can use the 3 elements formulas to solve the problem divide the number of soccer balls or the number of groups 6 into the total amount 240 to find the amount in one group or how much each soccer ball costs $240 \div 6 = 40$ 00 since one basketball cost 13 more than one soccer ball we add 13 to the cost of one soccer ball to find the cost of one basketball $40 + 13 = 53$ 00 one basketball costs 53 00 so 12 of them cost 12 groups of 53 00 each basketball costs the same so we can use the 3 elements formulas to solve the problem we multiply the number of groups 12 and the amount in each group 53 to find the total amount in all the groups or the total cost of 12 basketballs $12 \times 53 = 636$ 00 the techniques on using the 3 elements formulas to find the total amount in all the groups the number of groups and the amount in each group are reviewed and reinforced in this volume the volume also reinforces the techniques on using the multiplication and division equations to solve word problems there is more in the volume than what is mentioned detailed explanations of the reasoning and solving strategies perpetuate fragmentation though we have many problems and each problem seems to produce so many other problems perhaps we can consider together whether the wisest thing to do is not to seek the solution of any problem at all it seems to me that our minds are incapable of dealing with life as a whole we deal apparently with all problems fragmentarily separately not with an integrated outlook perhaps the first thing if we have problems is not to seek an immediate solution for them but to have the patience to inquire deeply into them and discover whether these problems can ever be solved by the exercise of will what is important i think is to find out not how to solve the problem but how to approach it an extensive compendium of krishnamurti s talks and discussions in the usa europe india new zealand and south africa from 1933 to 1967 the collected works have been carefully authenticated against existing transcripts and tapes each volume includes a frontispiece photograph of krishnamurti with question and subject indexes at the end the content of each volume is not limited to the subject of the title but rather offers a unique view of krishnamurti s extraordinary teachings in selected years the collected works offers the reader the opportunity to explore the early writings and dialogues in their most complete and authentic form excerpt from answers to the solving strategies if you want to set a solid foundation in math grasping the techniques on solving word problems is the key to it this set of books teaches you the techniques and strategies you need to solve word problems sample question in this volume an elephant weighs as much as 8 cows a cow weighs as much as 2 horses if each horse weighs 500 pounds how much does an elephant weigh reasoning and solution to find the weight of the elephant we need to first get the weight of 1 cow to find the weight of 1 cow we need to know the weight of 1 horse one horse weighs 500 pounds one cow weighs as much as 2 horses so when we find the weight of 2 horses we will know the weight of one cow one horse weighs 500 pounds so 2 of them weigh 2 groups of 500 pounds we multiply the number of horses 2 with the weight of 1 horse to find the weight of 2 horses $2 \times 500 = 1\,000$ pounds one cow weighs 1 000 pounds an elephant weighs as much as 8 cows one cow weighs 1 000 pounds so 8 of them weigh 8 groups of 1 000 pounds we multiply the number of cows 8 with the weight of one cow 1000 pounds to find the weight of 8 cows $8 \times 1000 = 8\,000$ pounds since 1 elephant weighs as much as 8 cows 1 elephant weighs 8 000 pounds the techniques on using the 3 elements formulas to find the total amount in all the groups the number of groups and the amount in each group are reviewed and reinforced in in these talks given in europe ojai and india krishnamurti addresses the need to approach our life problems in a manner does not perpetuate fragmentation though we have many problems and each problem seems to produce so many other problems perhaps we can consider together whether the wisest thing to do is not to seek the solution of any problem at all it seems to me that our minds are incapable of dealing with life as a whole we deal apparently with all problems fragmentarily separately not with an integrated outlook perhaps the first thing if we have problems is not to seek an immediate solution for them but to have the patience to inquire deeply into them and discover whether these problems can ever be solved by the exercise of will what is important i think is to find out not how to solve the problem but how to approach it an extensive compendium of krishnamurti s talks and discussions in the usa europe india new zealand and south africa from 1933 to 1967 the collected works have been carefully authenticated against existing transcripts and tapes each volume includes a frontispiece photograph of krishnamurti with question and subject indexes at the end the content of each volume is not limited to the subject of the title but rather offers a unique view of krishnamurti s extraordinary teachings in selected years the collected works offers the reader the opportunity to explore the early writings and dialogues in their most complete and authentic form
