this book covers all basic and advance features in net such as concepts of console application windows application and asp net application this book also covers in depth concepts of object oriented programming explains key topics such as web services wcf state management ado net and exception handling

S.A.M. Advanced Management Journal *1988*

this book presents the proceedings of the 4th brazilian technology symposium btsym 18 part i of the book discusses current technological issues on systems engineering mathematics and physical sciences such as the transmission line protein modified mortars electromagnetic properties clock domains chebyshev polynomials satellite control systems hough transform watershed transform blood smear images toxoplasma gondi operation system developments mimo systems geothermal photovoltaic energy systems mineral flotation application cmos techniques frameworks developments physiological parameters applications brain computer interface artificial neural networks computational vision security applications fpga applications iot residential automation data acquisition industry 4 0 cyber physical systems digital image processing patters recognition machine learning photocatalytic process physical chemical analysis smoothing filters frequency synthesizers voltage controlled ring oscillator difference amplifier photocatalysis and photodegradation part ii of the book discusses current technological issues on human smart and sustainable future of cities such as the digital transformation data science hydrothermal dispatch project knowledge transfer immunization programs efficiency and predictive methods pmbok applications logistics process iot data acquisition industry 4 0 cyber physical systems fingerspelling recognition cognitive ergonomics ecosystem services environmental ecosystem services valuation solid waste and university extension btsym is the brainchild of prof dr yuzo iano who is responsible for the laboratory of visual communications lcv at the department of communications decom of the faculty of electrical and computing engineering feec state university of campinas unicamp brazil

User's Guide to PCDANGER *1997*

recent advances in technology and manufacturing have made it possible to create small powerful energy efficient cost effective sensor nodes for specialized telecommunication applications nodes smart enough to be capable of adaptation self awareness and self organization sensor networks for sustainable development examines sensor network technologies that increase the quality of human life and encourage societal progress with minimal effect on the earth s natural resources and environment organized as a collection of articles authored by leading experts in the field this valuable reference captures the current state of the art and explores applications where sensor networks are used for sustainable development in agriculture environment energy healthcare transportation disaster management beneficial to designers and planners of emerging telecommunication networks researchers in related industries and students and academia seeking to learn about the impact of sensor networks on sustainable development sensor networks for sustainable development provides scientific tutorials and technical information about smart sensor networks and their use in everything from remote patient monitoring to improving safety on the roadways and beyond
