this comprehensive handbook is the first to provide a practical interdisciplinary review of ethical issues as they relate to quantitative methodology including how to present evidence for reliability and validity what comprises an adequate tested population and what constitutes scientific knowledge for eliminating biases the book uses an ethical framework that emphasizes the human cost of quantitative decision making to help researchers understand the specific implications of their choices the order of the handbook chapters parallels the chronology of the research process determining the

research design and data collection data analysis and communicating findings each chapter explores the ethics of a particular topic identifies prevailing methodological issues reviews strategies and approaches for handling such issues and their ethical implications provides one or more case examples outlines plausible approaches to the issue including best practice solutions part 1 presents ethical frameworks that cross cut design analysis and modeling in the behavioral sciences part 2 focuses on ideas for disseminating ethical training in statistics courses part 3 considers the ethical aspects of selecting measurement instruments and sample size planning and explores issues related to high stakes testing the defensibility of experimental vs quasi experimental research designs and ethics in program evaluation decision points that shape a researchers approach to data analysis are examined in part 4 when and why analysts need to account for how the sample was selected how to evaluate tradeoffs of hypothesis testing vs estimation and how to handle missing data ethical issues that arise when using techniques such as factor analysis or multilevel modeling and when making causal inferences are also explored the book concludes with ethical aspects of reporting meta analyses of cross disciplinary statistical reform and of the publication process this handbook appeals to researchers and practitioners in psychology human development family studies health education sociology social work political science and business marketing this book is also a valuable supplement for quantitative methods courses required of all graduate students in these fields
