this valuable book examines the complex psychological processes involved in answering different types of survey questions drawing on both classic and modern research from cognitive psychology social psychology and survey methodology the authors examine how survey responses are formulated and they demonstrate how seemingly unimportant features of the survey can affect the answers obtained the book provides a comprehensive review of the sources of response errors in surveys and it offers a coherent theory of the relation between the underlying views of the public and the results of public opinion polls topics include the comprehension of survey questions the recall of relevant facts and beliefs estimation and inferential processes people use to answer survey questions the sources of the apparent instability of public opinion the difficulties in getting responses into the required format and the distortions introduced into surveys by deliberate misreporting the problem with survey research makes a case against survey research as a primary source of reliable information george beam argues that all survey research instruments all types of asking including polls face to face interviews and focus groups produce unreliable and potentially inaccurate results because those who rely on survey research only see answers to questions it is impossible for them or anyone else to evaluate the results they cannot know if the answers correspond to respondents actual behaviors objective phenomena or to their true beliefs and opinions subjective phenomena reliable information can only be acquired by observation experimentation multiple sources of data formal model building and testing document analysis and comparison in fifteen chapters divided into six parts ubiquity of survey research the problem asking instruments asking settings askers and proper methods and research designs the problem with survey research demonstrates how asking instruments settings in which asking and answering take place and survey researchers themselves skew results and thereby make answers unreliable the last two chapters and appendices examine observation other methods of data collection and research designs that may produce accurate or correct information and shows how reliance on survey research can be overcome and must be taking into account both traditional and emerging modes this comprehensive new handbook covers all major methodological and statistical issues in designing and analyzing surveys with contributions from the world's leading survey methodologists and statisticians this invaluable new resource provides guidance on collecting survey data and creating meaningful results featuring examples from a variety of countries the book reviews such things as how to deal with sample designs write survey questions and collect data on the internet a thorough review of the procedures associated with multiple modes of collecting sample survey information and applying that combination of methods that fit the situation best is included the international handbook of survey methodology opens with the foundations of survey design ranging from sources of error to ethical issues this is followed by a section on design that reviews sampling challenges and tips on writing and testing questions for multiple methods part three focuses on data collection from face to face interviews to internet and interactive voice response to special challenges involved in mixing these modes within one survey analyzing data from both simple and complex surveys is then explored as well as procedures for adjusting data the book concludes with a discussion of maintaining quality intended for advanced students and researchers in the behavioral social and health sciences this must have resource will appeal to those interested in conducting or using survey data from anywhere in the world especially those interested
