fib bulletin 40 deals mainly with the use of frp bars as internal reinforcement for concrete structures the background of the main physical and mechanical properties of frp reinforcing bars is presented with special emphasis on durability aspects for each of the typical ultimate and serviceability limit states the basic mechanical model is given followed by different design models according to existing codes or design guidelines composite frp materials are still relatively new in construction and most engineers are unfamiliar with their properties and characteristics the second chapter of this bulletin therefore aims to provide practising engineers with the necessary background knowledge in this field and also presents typical products currently available in the international market the third chapter deals with the issue of durability and identifies the parameters that can lead to deterioration which is necessary information when addressing design issues a series of parameters is used to identify the allowable

stress in the frp after exposure for a specified period of time in a specific environment the bulletin covers the issues of ultimate limit states primarily dealing with flexural design serviceability limit states dealing with deflections and cracking shear and punching shear and bond and tension stiffening it provides not only the state of the art but also in many cases ideas for the next generation of design guidelines the final chapter deals with the fundamental issue of design philosophy the use of these new materials as concrete reinforcement has forced researchers to re think many of the fundamental principles used until now in rc design the bulletin ends with a discussion of a possible new framework for developing partial safety factors to ensure specific safety levels that will be flexible enough to cope with new materials

established as the foremost textbook on communication the seventh edition of owen hargie s skilled interpersonal communication is thoroughly revised and updated with the latest research findings theoretical developments and applications the contribution of skilled interpersonal communication to success in both personal and professional contexts is now widely recognised and extensively researched people have a deep seated and universal need to interact with others and the greater their communicative ability the more satisfying and rewarding will be their lives the main focus of this book is on the identification analysis and evaluation of the core skills needed in these interactions the first two chapters provide details of the nature of interpersonal communication and socially skilled performance respectively with a review of the main theoretical perspectives pertaining to each the book then offers detailed accounts of the fourteen main skill areas nonverbal communication reinforcement questioning reflecting listening explaining self disclosure set induction closure assertiveness influencing negotiating and interacting in and leading group discussions the book concludes with a discussion on the ethical issues in interpersonal communication this new edition also features an extended section on groupthink and analyses the impact of the coronavirus pandemic on aspects such as greeting patterns and the effectiveness of project fear by the uk government to secure citizen compliance written by one of the foremost international experts in the field this is essential reading for students of interpersonal

communication in general and to qualified personnel and trainees in many fields
