 ranking207 calendar208 ken s talk209 price list writing a comprehensive book on satellite communications requires the com mand of many technical disciplines and the
 availability of up to date information on international recommendations system architectures and equipment stand ards it is therefore
 necessary to involve many authors each possessing a good level of knowledge in a particular discipline the problem of using a
 coherent and unambiguous set of definitions and basic terms has been solved by including in the book all the background information
 needed for understanding satellite communication systems without any major reference to other textbooks specializing in particular
 disciplines the obvious consequence of this approach has been the large size of the book with the advantages however of practically
 complete independence from other books more systematic discussion of the subject matter and better readability after the required
 background information emphasis has been placed on the discussion of techniques and system design criteria rather than on specific
 equipment implementation or description of particular systems the book may be divided in five parts as follows the first five chapters
 provide most of the required background information chapter 6 is an introductory outline of satellite communication systems chapters
 7 to 13 deal with the various aspects of technical system design chapter 14 discusses system economics chapter 15 provides a brief
 insight into some foreseeable future develop ments of satellite communications vol 58 2020 mar cedric gloria 010
