German Technical Dictionary (Volume 1) 2013-01-11

since its publication in 1995 the german technical dictionary has established itself as the definitive resource for anyone who needs to translate technical documents between german and english this new edition has been substantially revised to reflect the technological environment of the twenty first century the revised edition contains over 75 000 entries of which over 5 000 are new with many new entries in the areas of the internet and telecommunications bio technology and the new genetics new developments in health technology throughout this dictionary continues to benefit from the features that made the first edition so valuable including accurate translations in british and american english and an attractive durable and easy to use layout

Occasional Paper - Lee Kong Chian Institute of Mathematics & Computer Science 1975

this book constitutes the proceedings of the 8th international conference on parallel processing and applied mathematics ppam 2009 held in wroclaw poland in september 2009

Parallel Processing and Applied Mathematics, Part I 2010-07-07

this book constitutes thoroughly refereed post conference proceedings of the 8th asian symposium on computer mathematics ascm 2007 held in singapore in december 2007 the 22 revised full papers and 5 revised poster papers presented together with 3 invited lectures were carefully selected during two rounds of reviewing and improvement from 65 submissions the papers are organized in topical sections on algorithms and implementations numerical methods and applications cryptology and computational logic

this book contains the proceedings of the meeting on applied mathematics in the aerospace field held in erice sicily italy from september 3 to september 10 1991 the occasion of the meeting was the 12th course of the school of mathematics guido stampacchia directed by professor franco giannessi of the university of pisa the school is affiliated with the international center for scientific culture etto雷 majorana which is directed by professor antonino zichichi of the university of bologna the objective of the course was to give a perspective on the state of the art and research trends concerning the application of mathematics to aerospace science and engineering the course was structured with invited lectures and seminars concerning fundamental aspects of differential equations mathematical programming optimal control numerical methods perturbation methods and variational methods occurring in flight mechanics astrodynamics guidance control aircraft design fluid mechanics rarefied gas dynamics and solid mechanics the book includes 20 chapters by 23 contributors from the united states germany and italy and is intended to be an important reference work on the application of mathematics to the aerospace field it reflects the belief of the course directors that strong interaction between mathematics and engineering is beneficial indeed essential to progresses in both areas

traditionally the stability seminar organized in moscow but held in different locations has dealt with a spectrum of topics centering around characterization problems and their stability limit theorems probability metrics and theoretical robustness this volume likewise focusses on these main topics in a series of original and recent research articles

this is the first extensive study in english or chinese of china s reception of the celebrated physicist and his theory of relativity in a series of biographical studies of chinese physicists hu describes the chinese assimilation of relativity and explains how chinese physicists offered arguments and theories of their own hu s account concludes with the troubling story of the fate of foreign ideas such as einstein s in the chinese cultural revolution 1966 1976 when the theory of relativity was denigrated along with einstein s ideas on democracy and world peace

the cambridge handbook of engineering education research is the critical reference source for the growing field of engineering education research featuring the work of world luminaries writing to define and inform this emerging field the handbook draws extensively on contemporary research in the learning sciences examining how technology affects learners and learning environments and the role of social context in learning since a landmark issue of the journal of engineering education 2005 in which senior scholars argued for a stronger theoretical and empirically driven agenda engineering education has quickly emerged as a research driven field increasing in both

theoretical and empirical work drawing on many social science disciplines disciplinary engineering knowledge and computing the handbook is based on the research agenda from a series of interdisciplinary colloquia funded by the us national science foundation and published in the journal of engineering education in october 2006

natural disasters are occasional intense events that disturb earth's surface but their impact can be felt long after hazard events such as earthquakes volcanoes drought and storms can trigger a catastrophic reshaping of the landscape through the erosion transport and deposition of different kinds of materials geomorphology and natural hazards understanding landscape change for disaster mitigation is a graduate level textbook that explores the natural hazards resulting from landscape change and shows how an earth science perspective can inform hazard mitigation and disaster impact reduction volume highlights include definitions of hazards risks and disasters impact of different natural hazards on earth surface processes geomorphologic insights for hazard assessment and risk mitigation models for predicting natural hazards how human activities have altered natural hazards complementarity of geomorphology and engineering to manage threats

this volume includes extended and revised versions of a set of selected papers from the international conference on electric and electronics eeic 2011 held on june 20 22 2011 which is jointly organized by nanchang university springer and ieee ias nanchang chapter the objective of eeic 2011 volume 2 is to provide a major interdisciplinary forum for the presentation of new approaches from electrical engineering and controls to foster integration of the latest developments in scientific research 133 related topic papers were selected into this volume all the papers were reviewed by 2 program committee members and selected by the volume editor prof min zhu we hope every participant can have a good opportunity to exchange their research ideas and results and to discuss the state of the art in the areas of the electrical engineering and controls
