a fascinating study that brings the power of behavioral economics to how schools work how students learn and how we can help them succeed for decades schools have invested substantial resources in boosting educational outcomes for disadvantaged students but those investments have not always generated positive outcomes although many communities have expanded school choice for example families often choose to keep their children in failing schools and while the federal government has increased the size of pell grants many college bound students who would be eligible for aid never apply then there is the troubling trend of summer melt in which up to 40 percent of high school graduates who have been accepted to college mostly from underserved communities fail to show up for the fall semester in the 160 character solution benjamin l castleman shows how insights from behavioral economics the study of how social cognitive and emotional factors affect our decisions can be leveraged to help students complete assignments perform to their full potential on tests and choose schools and colleges where they are well positioned for success by employing behavioral strategies or nudges castleman shows administrators teachers and parents can dramatically improve

educational outcomes from preschool to college castleman applies the science of decision making to explain why inequalities persist at various stages in education and to identify innovative solutions to improve students academic achievement and attainment by focusing on behavioral changes castleman demonstrates that small changes in how we ask questions design applications and tailor reminders can have remarkable impacts on student and school success

suppose someone told you that for just two cents on the national dollar we could have a country where everyone had health insurance full time workers earned a living wage poor children had great teachers in fixed up schools and politicians no longer had to grovel to wealthy donors and suppose

that when we were done government would still be smaller than it was when ronald reagan was president if you re like most people you d probably think that for two cents on the dollar this sounds like an intriguing deal but 2 percent of america s gdp is more than 200 billion a year way beyond what politicians in washington think is possible between our proper intuition that 2 percent is a small amount and the washington consensus that a 2 percent shift in priorities is beyond imagining lies the opportunity to transform american politics in this agenda setting book matthew miller challenges our country and those who would lead it to change the way we think about our public responsibilities before the baby boomers retirement siphons all the money out of the system the two percent solution is a call to arms that no serious candidate republican or democrat can afford to ignore
