just some years before there have been no throngs of machine learning scientists developing intelligent merchandise and services at major corporations and startups once the youngest folks the authors entered the sector machine learning didn't command headlines in daily newspapers our oldsters had no plan what machine learning was including why we would like it to a career in medication or law machine learning was an advanced tutorial discipline with a slender set of real world applications and people applications e.g. speech recognition and pc vision needed most domain data that they were usually thought to be separate areas entirely that machine learning was one tiny part neural networks the antecedents of the deep learning models that we tend to specialize in during this book were thought to be out of date

tools in simply the previous five years deep learning has taken the world by surprise using fast progress in fields as diverse as laptop vision herbal language processing computerized speech recognition reinforcement learning and statistical modelling with these advances in hand we can now construct cars that power themselves with increasing autonomy clever reply structures that anticipate mundane replies assisting humans to dig out from mountains of email and software program retailers that dominate the world s first class people at board video games like go a feat once deemed to be a long time away already these equipment are exerting a widening impact changing the way films are made diseases are diagnosed and enjoying a developing role in simple sciences from astrophysics to biology this e book represents our attempt to make deep learning approachable instructing you each the concepts the context and the code
