condition tests have been made of a spring loaded tab which is referred to as a springy tab installed on the elevator of a low wing scout bomber the tab was arranged to deflect upward with decrease in speed which caused an increase in the pull force required to trim at low speeds and thereby increased the stick free static longitudinal stability of the airplane it was found that the springy tab would increase the stick free stability in all flight conditions would reduce the danger of inadvertent stalling because of the definite pull force required to stall the airplane with power on would reduce the effect of center of gravity position on stick free static stability and would have little effect on the elevator stick forces in accelerated flight another advantage of the springy tab is that it might be used to provide almost any desired variation of elevator stick force with speed by adjusting the tab hinge moment characteristics and the variation of spring bobweight the springy tab would provide stick free static stability without requiring a pull force to hold the stick back while taxiing a device similar to the springy tab may be used on the rudder or ailerons to

eliminate undesirable trim force variations with speed first published in 2004 routledge is an imprint of taylor francis an informa company over the last fifty years in the united states unions have
