The solar system is a vast and diverse place, with many different types of celestial bodies. One of the most interesting patterns in the solar system is the way that the planets are arranged. The inner planets are rocky and have solid surfaces, while the outer planets are gas giants with no solid surfaces. This is a clear pattern that can be seen throughout the solar system.

Another pattern in the solar system is the way that the moons are arranged. Most of the moons in the solar system are found around the gas giants, and they are much smaller than the planets they orbit. This is also a clear pattern that can be seen throughout the solar system.

The solar system is a complex and fascinating place, and there are many more patterns to be discovered. As we learn more about the solar system, we will continue to uncover the many secrets that it holds.

## *The Jungle Book 2015-05*

across a range of institutional settings practitioners and professionals are eliciting and capturing spoken talk from clients sarangi 1998 transcribing that talk and later repurposing the transcripts in place of the original interaction this research topic seeks both to shed light on this often overlooked institutional process and to encourage further linguistic input into this area of professional practice transcription is almost always an institutional practice park bucholtz 2009 providing a written record of spoken interaction to be used by another party at a later date in another setting or context there are a number of underappreciated features and consequences of this transformational process which we hope this research topic will expose and examine
