The Data Model Toolkit 2013-07-15

adopting the latest technological and data related innovations has caused many organisations to realise they don t have a firm grasp on their basic operational data this is a problem that logical data models are uniquely qualified to help them solve the realisation of the need to define a logical data model may be driven by any number of reasons including trying to link big data analytics to operational data plunging into digital marketing choosing the best saas solution carrying out a core data migration developing a data warehouse enhancing data governance processes or even just trying to get everyone to agree on their product specifications this book will provide you with the skills required to start to answer these and many similar types of questions it is not written with a focus on it development so you don t need a technical background to get the most from it but for any professional working in an organisation s data landscape this book will provide the skills they need to define high quality and beneficial data models quickly and easily it does this using a wealth of practical examples tips and techniques as well as providing checklists and templates it is structured into three parts the foundations what are the solid foundations necessary for building effective data models the tools what tools are required to enable you to specify clear precise and accurate data model definitions the deliverables what processes will you need to successfully define the models what will they deliver and how can we make them beneficial to the organisation in this data rich era it is even more critical for organisations to answer the question of what their data means and the value it can bring those who can will gain a competitive advantage through their use of data to streamline their operations and energise their strategies core to revealing this meaning is the data model that is now more than ever the lynchpin of success the data model toolkit provides the essential knowledge and skills that will ensure this success reem zahran global it platform director tns we work with many enterprise customers to help them transform their technology and it always starts with data the key is a clear definition of their data quality completeness and governance this book shows you step by step how to define and use data models as powerful tools to define an organisation s data and maximise its business benefit john cassarly ceo xceed group

teachers spend a great amount of time grading free text answer type questions to encounter this challenge an auto grader system is proposed the thesis illustrates that the auto grader can be approached with simple recurrent and transformer based neural networks hereby the transformer based models has the best performance it is further demonstrated that geometric representation of question answer pairs is a worthwhile strategy for an auto grader finally it is indicated that while the auto grader could potentially assist teachers in saving time with grading it is not yet on a level to fully replace teachers for this task

the graphical user interface gui as the most prevailing type of user interface ui in today s interactive applications restricts the interaction with a computer to the visual modality and is therefore not suited for some users e g with limited literacy or typing skills in some circumstances e g while moving around with their hands or eyes busy or when the environment is constrained e g the keyboard and the mouse are not available in order to go beyond the gui constraints the multimodal mm uis appear as paradigm that provide users with great expressive power naturalness and flexibility in this thesis we argue that developing mm uis combining graphical and vocal modalities is an activity that could benefit from the application of a methodology which is composed of a set of models a method manipulating these models and the tools implementing the method therefore we define a design space based method that is supported by model to model colored transformations in order to obtain mm uis of information systems the design space is composed of explicitly defined design options that clarify the development process in a structured way in order to require less design effort the feasibility of the methodology is demonstrated through three case studies with different levels of complexity and coverage in addition an empirical study is conducted with end users in order to measure the relative usability level provided by different design decisions
