the overall goal of vehicle design is to make a robust and reliable product that meets the demands of the customers and this book treats the topic of analysing and describing customer loads with respect to durability guide to load analysis for vehicle and durability engineering supplies a variety of methods for load analysis and also explains their proper use in view of the vehicle design process in part i overview there are two chapters presenting the scope of the book as well as providing an introduction to the subject part ii methods for load analysis describes useful methods and indicates how and when they should be used part iii load analysis in view of the vehicle design process offers strategies for the evaluation of customer loads in particular characterization of customer populations which leads to the derivation of design loads and finally to the verification of systems and components key features is a comprehensive collection of methods for load analysis vehicle dynamics and statistics combines standard load data analysis methods with statistical aspects on deriving test loads from surveys of customer usage sets the methods used in the framework of system dynamics and

response and derives recommendations for the application of methods in engineering practice presents a reliability design methodology based on statistical evaluation of component strength and customers loads includes case studies and illustrative examples that translate the theory into engineering practice developed in cooperation with six european truck manufacturers daf daimler iveco man scania and volvo to meet the needs of industry guide to load analysis for vehicle and durability engineering provides an understanding of the current methods in load analysis and will inspire the incorporation of new techniques in the design and test processes

guidelines for design of low rise buildings subjected to lateral forces is a concise guide that identifies performance issues concerns and research needs associated with low rise buildings the book begins with an introduction that discusses special problems with low rise buildings subjected to wind and earthquakes chapter 2 examines probabilistic methods and their use in evaluating risks from natural hazards it also addresses the characteristics of wind and seismic forces and levels of risk implied by building codes wind forces are covered in more detail in chapter 3 with discussions of wind force concepts and wind structure interactions chapter 4 is devoted to earthquake forces and traces the development of building codes for earthquake resistant design chapter 5 describes the main framing systems used to resist lateral forces and discusses the code requirements for drift control the designs and requirements for connections between building elements are addressed in chapter 6 it includes examples along with several illustrations of suitable connections the performance of non structural elements during wind and earthquake forces is also examined in detail this book serves as an important reference for civil engineers construction engineers architects and anyone concerned with structural codes and standards it is an excellent guide that can be used to supplement design recommendations and provide a design basis where there are no current requirements

covid 19 has changed not only human lives since the beginning of the year 2020 but systems of human society as well legal measures have been employed in every country to mandate the state s control of human behavior in order to stop the pandemic but the mode of legal control has differed by country showing different results in terms of constraining the spread of infection while the behavioral restrictions continue the socio economic impacts of the pandemic have been causing another catastrophe particularly in the most vulnerable sectors of each society small and medium sized enterprises smes are typical representatives of such vulnerable groups compelled to assume the economic burdens of the pandemic that have been shifted from the larger economic actors that hold the advantage in contractual negotiations statistical data on infection status have revealed a great gap between countries such as european nations reaching the level of several thousand deaths per one hundred thousand population while most asian countries have maintained a level of one or two digits even though covid 19 affects the whole world the redistribution of risks in the pandemic is a goal to be pursued in the socio cultural context of each society this book explores the law and social changes in asian countries under the impact of covid 19 with a particular focus on the social relations surrounding the smes these form the center of contractual relations between various socio economic actors and at the same time are a direct counterpart of the governmental sme policies peculiar to asian interventionist governments a comparative approach is taken using the results of interview surveys based on structured questions conducted via research collaboration between the contributors from japan as well as other asian countries a comparative analysis of the risk redistribution in the pandemic between countries that share similar preconditions is still possible and meaningful the authors of this book hold the view that asian countries have sufficient bases for international comparison particularly on the risk reallocation in the sme sector given the relatively well controlled level of infection presumably due to the similarity of cooperative social culture another basis for comparison is the similarity of the laws surrounding the business operation of smes since normal times which makes it feasible to compare the difference in the pandemic what risks should be reallocated between whom and how
