this book combines elementary theory from computer science with real world challenges in global geodetic observation based on examples from the geodetic observatory wettzell germany it starts with a step by step introduction to developing stable and safe scientific software to run successful software projects the use of

software toolboxes is another essential aspect that leads to the application of generative programming an example is a generative network middleware that simplifies communication one of the book's main focuses is on explaining a potential strategy involving autonomous production cells for space geodetic techniques the complete software design of a satellite laser ranging system is taken as an example such automated systems are then combined for global interaction using secure communication tunnels for remote access the network of radio telescopes is used as a reference combined observatories form coordinated multi agent systems and offer solutions for operational aspects of the global geodetic observing system ggos with regard to industry 4 0

statistical techniques for neuroscientists introduces new and useful methods for data analysis involving simultaneous recording of neuron or large cluster brain region neuron activity the statistical estimation and tests of hypotheses are based on the likelihood principle derived from stationary point processes and time

series algorithms and software development are given in each chapter to reproduce the computer simulated results described therein the book examines current statistical methods for solving emerging problems in neuroscience these methods have been applied to data involving multichannel neural spike train spike sorting blind source separation functional and effective neural connectivity spatiotemporal modeling and multimodal neuroimaging techniques the author provides an overview of various methods being applied to specific research areas of neuroscience emphasizing statistical principles and their software the book includes examples and experimental data so that readers can understand the principles and master the methods the first part of the book deals with the traditional multivariate time series analysis applied to the context of multichannel spike trains and fmri using respectively the probability structures or likelihood associated with time to fire and discrete fourier transforms dft of point processes the second part introduces a relatively new form of statistical spatiotemporal modeling for fmri and eeg data analysis in addition to neural scientists and statisticians anyone wishing to employ intense computing methods to extract important features and information directly from data rather than relying heavily on models built on leading cases such as linear regression or gaussian processes will find this book extremely helpful

handbook of heavy oil properties and analysis understand the future of oil production with this comprehensive guide heavy oil also known as viscous oil is oil too viscous to flow normally from wells and reservoirs in recent decades it has become increasingly important as a source of liquid oil for use in industrial processes this places all the greater importance on proper analysis of heavy oil and its properties so that it can be more effectively refined and deployed to meet ever growing energy needs handbook of heavy oil properties and analysis provides a comprehensive introduction to the analysis of viscous oil and its properties it discusses the full range of tests and analytical procedures by which the behavior and refinability of viscous oil samples can be predicted

and connects theoretical knowledge to refinery practice throughout additionally its incorporation of the latest environmental regulations makes it an invaluable resource readers will also find detailed coverage of both physical properties and chemical composition of heavy oil an author more than fifty years of experience in the process industries discussion of new methods for determining instability and incompatibility this book is a useful reference for scientists and engineers in the oil refining industries chemists and researchers in heavy oil and adjacent industries and government officials and regulators

the definitive guide to the myriad analytical techniques available to scientists involved in biotherapeutics research analytical characterization of biotherapeutics covers all current and emerging analytical tools and techniques used for the characterization of therapeutic proteins and antigen reagents from basic recombinant antigen and antibody characterization to complex analyses for increasingly complex molecular designs the book explores the history of the analysis techniques and offers valuable insights into the most important emerging analytical solutions in addition it frames critical questions warranting attention in the design and delivery of a therapeutic protein exposes analytical challenges that may occur when characterizing these molecules and

presents a number of tested solutions the first single volume guide of its kind analytical characterization of biotherapeutics brings together contributions from scientists at the leading edge of biotherapeutics research and manufacturing key topics covered in depth include the structural characterization of recombinant proteins and antibodies antibody de novo sequencing characterization of antibody drug conjugates characterization of bi specific or other hybrid molecules characterization of manufacturing host cell contaminant proteins analytical tools for biologics molecular assessment and more each chapter is written by a recognized expert or experts in their field who discuss current and cutting edge approaches to fully characterizing biotherapeutic proteins and antigen reagents covers the full range of characterization strategies for large molecule based therapeutics provides an up to date account of the latest approaches used for large molecule characterization chapters cover the background needed to understand the challenges at hand solutions to characterize these large molecules and a summary of emerging options for analytical characterization analytical characterization of biotherapeutics is an up to date resource for analytical scientists biologists and mass spectrometrists involved in the analysis of biomolecules as well as scientists employed in the pharmaceuticals and biotechnology industries graduate students in biology and analytical science and their instructors will find it to be fascinating and instructive supplementary reading
