2005-04-10 this book describes applications of the ads cft duality to the real world the ads cft duality is an idea that originated from string theory and is a powerful tool for analyzing strongly coupled gauge theories using classical gravitational theories in recent years it has been shown that one prediction of ads cft is indeed close to the experimental result of the real quark gluon plasma since then the ads cft duality has been applied to various fields of physics examples are qcd nuclear physics condensed matter physics and nonequilibrium physics the aim of this book is to provide background materials such as string theory black holes nuclear physics condensed matter physics and nonequilibrium physics as well as key applications of the ads cft duality in a single volume the emphasis throughout the book is on a pedagogical and intuitive approach focusing on the underlying physical concepts it also includes step by step computations for important results which are useful for beginners

AdS/CFT Duality User Guide 2015-04-01 catchment hydrological modelling the science and art covers various methods and equations for modeling all components of a chm readers are presented with multiple methods and approaches to modeling the same component allowing them to distinguish the differences between methods the books also provides a clear understanding of what makes some commonly used hydrological models similar or different and what their strengths and weaknesses may be this comprehensive guide contains questions and answers in each chapter along with concepts and detailed equations that are fundamental to understanding chm this book is useful to students and professionals in the fields of catchment and hydrology as well as environmental and civil engineers includes practical advice on developing and or applying chm models empowering readers to do so themselves presents practical aspects of catchment modeling from model structure design to model operation presents hydrological catchment modeling in a clear and coherent way while also describing different approaches for the same processes

3040XXXXXXXXXXXXXXXXXXXX 1961 this proceedings book presents selected contributions from the xviii congress of apdio the portuguese association of operational research held in valença on june 28 30 2017 prepared by leading portuguese and international researchers in the field of operations research it covers a wide range of complex real world applications of operations research methods using recent theoretical techniques in order to narrow the gap between academic research and practical applications of particular interest are the applications of nonlinear and mixed integer programming data envelopment analysis clustering techniques hybrid heuristics supply chain management and lot sizing and job scheduling problems in most chapters the problems methods and methodologies described are complemented by supporting figures tables and algorithms the xviii congress of apdio marked the 18th installment of the regular biannual meetings of apdio the portuguese association of operational research the meetings bring together researchers scholars and practitioners as well as msc and phd students working in the field of operations research to present and discuss their latest works the main theme of the latest meeting was operational research pro bono given the breadth of topics covered the book offers a valuable resource for all researchers students and practitioners interested in the latest trends in this field
