this book presents a realistic and thoroughly spiritual outlook upon the entire created reality it lets us envisage that

various created entities are participant in a relationship with god that becomes increasingly one of an intimate personal quality that is a relationship of love it thus invites discernment that the universal reality is valuable in its own right and not only as a good for the use of humanity drawing mainly upon scripture ancient writers especially maximus the confessor as well as contemporary natural sciences this book encourages the reader to perceive human salvation not as a lifting of humanity out of creation but as a transformation into god s presence in the midst of the wider created order it shows that christian faith at its best does not exclude the wider creation but provides us with insight and hope for a harmonious being in god that is inclusive of creation it shows that christian faith can be a resource that helps overcome the ecological crisis

Unity of knowledge in transdisciplinary research for sustainable development theme is a component of encyclopedia of social sciences and humanities in the global encyclopedia of life support systems eolss which is an integrated compendium of twenty encyclopedias today there is a social need for a comprehensive unity of knowledge that would provide orientation and ensure action in the context of the complex problems of modern civilization based on an intellectual need for unity of knowledge different concepts of unity of knowledge have emerged in the course of the history of ideas the intellectual need for unity can be directed at the world science action or the individual it can involve the quest for the unity of the world based on a principle that is immanent in it the unity of science as a theoretical methodical or epistemological unity the unity of action as a correlation of scientific pragmatic and moral knowledge or finally unity as the educational task of the individual the concepts associated with unity of knowledge can go in two directions the first assumes that there is a unity existing in the world that can be perceived by man it is thought of as an order of being i.e. an ontological unity of the plurality of phenomena that consist in their common nature the other direction is based on the assumption that unity is a construction of a subject based on its cognitive

principles and structures thus it is not something that can be discovered as an existing objective order and is instead subjective these two volumes present some aspects of unity of knowledge in transdisciplinary research for sustainable development in three parts the purpose of the first part is to trace back the core ideas in transdisciplinary thinking in the history of western philosophy and science to locate socially the concerns of transdisciplinary research and to give an account of the development of transdisciplinary research the second group of chapters deals with methodological and management problems related to transdisciplinary research with regard to problem identification and structuring of research questions with knowledge integration in problem investigation as well as with evaluation an outline of the institutional measures and transformations to enable and support transdisciplinary research is given in the third part institutional strategies build on organizational arrangements and links across academic institutions in education and research on networks between science and society for joint knowledge production in temporally limited settings of research programs or projects but they also set up new institutions such as centers for advanced studies national offices agencies and networks these two volumes are aimed at a wide spectrum of audiences university and college students educators research personnel and all those concerned with sustainable development
