~~The Big Book of Chemistry Teacher Stories~~

1995

explains the fundamental theory and mathematics of water and wastewater treatment processes by carefully explaining both the underlying theory and the underlying mathematics this text enables readers to fully grasp the fundamentals of physical and chemical treatment processes for water and wastewater throughout the book the authors use detailed examples to illustrate real world challenges and their solutions including step by step mathematical calculations each chapter ends with a set of problems that enable readers to put their knowledge into practice by developing and analyzing complex processes for the removal of soluble and particulate materials in order to ensure the safety of our water supplies designed to give readers a deep understanding of how water treatment processes actually work water quality engineering explores application of mass balances in continuous flow systems enabling readers to understand and predict changes in water quality processes for removing soluble contaminants from water including treatment of municipal and industrial wastes processes for removing particulate materials from water membrane processes to remove both soluble and particulate materials following the discussion of mass balances in continuous flow systems in the first part of the book the authors explain and analyze water treatment processes in subsequent chapters by setting forth the relevant mass balance for the process reactor geometry and flow pattern under consideration with its many examples and problem sets water quality engineering is recommended as a textbook for graduate courses in physical and chemical treatment processes for water and wastewater by drawing together the most recent research findings and industry practices this text is also recommended for professional environmental engineers in search of a contemporary perspective on water and wastewater

half a million years ago our ancestors learned to make fire from scratch they crafted intricate tools from stone and brewed mind altering elixirs from honey their descendants transformed clay into pottery wool into clothing and ashes into cleansers in ceramic crucibles they won metal from rock the metals lead to colored glazes and glass buildings of brick and mortar enshrined books of parchment and paper kings and queens demanded ever more colorful clothing and accessories in order to out class clod hoppers and call girls kingdoms rose and fell by the power of saltpeter sulfur and charcoal and the demands of everyday folk for glass and paper and soap stimulated the first round of chemical industrialization from sulfuric acid to sodium carbonate from aniline dyes to analgesic drugs from blasting powder to fertilizers and plastics in a phrase from caveman to

archetypal characters deliver first hand accounts of the births of their respective technologies the spirit of fire for example was born in the first creature to cultivate the flame this spirit passed from one person to another from one generation to another from one millennium to another arriving at last in the pages of this book the spirit of earth taught folks to make tools of stone the spirit of air imparted knowledge of units and the spirit of water began with the invention of spirits having traveled the world from age to age who can say where they will find their next home perhaps they will find one in you

a large number of biological physical and social systems contain complex networks knowledge about how these networks operate is critical for advancing a more general understanding of network behavior to this end each of these disciplines has created different kinds of statistical theory for inference on network data to help stimulate further progress in the field of statistical inference on network data the nrc sponsored a workshop that brought together researchers who are dealing with network data in different contexts this book which is available on cd only contains the text of the 18 workshop presentations the presentations focused on five major areas of research network models dynamic networks data and measurement on networks robustness and fragility of networks and visualization and scalability of networks

forensics seems to have the unique ability to maintain student interest and promote content learning i still have students approach me from past years and ask about the forensics case and specific characters from the story i have never had a student come back to me and comment on that unit with the multiple choice test at the end from the introduction to forensics in chemistry the murder of kirsten k how did kirsten k s body wind up at the bottom of a lake and what do wedding cake ingredients soil samples radioactive decay bone age blood stains bullet matching and drug lab evidence reveal about whodunit these mysteries are at the core of this teacher resource book which

~~meets the unique needs of high school chemistry classes in a highly memorable way the book~~
makes forensic evidence the foundation of a series of eight hands on week long labs as you weave the labs throughout the year and students solve the case the narrative provides vivid lessons in why chemistry concepts are relevant and how they connect all chapters include case information specific to each performance assessment and highlight the related national standards and chemistry content chapters provide teacher guides to help you set up student performance assessments a suspect file to introduce the characters and new information about their relationships to the case samples of student work that has been previously assessed and that serves as an answer key for you grading rubrics using forensics in chemistry as your guide you will gain the confidence to use inquiry based strategies and performance based assessments with a complex chemistry curriculum your students may gain an interest in chemistry that rivals their fascination with bones and csi

in a clear and concise manner this book explains how to apply concepts in chemical reaction engineering and transport phenomena to the design of catalytic combustion systems although there are many textbooks on the subject of chemical reaction engineering catalytic combustion is mentioned either only briefly or not at all the authors have chosen three examples where catalytic combustion is utilized as a primary combustion process and natural gas is used as a fuel stationary gas turbines process fluid heaters and radiant heaters these cover much of the area where research

is currently most active in each of these there are clear environmental benefits to be gained illustrating catalytic combustion as a cleaner primary combustion process the dominant heat transfer processes in each of the applications are different as are the support systems flow geometrics and operating conditions
