The Foundations of Real Analysis 2015-10-20

this textbook covers the subject of real analysis from the fundamentals up through beginning graduate level it is appropriate as an introductory course text or a review text for graduate qualifying examinations some special features of the text include a thorough discussion of transcendental functions such as trigonometric logarithmic and exponential from power series expansions deducing all important functional properties from the series definitions the text is written in a user friendly manner and includes full solutions to all assigned exercises throughout the text

Solution-Focused Brief Therapy with the LGBT Community 2015-10-23

solution focused brief therapy with the lgbt community is a practical guide for mental health professionals who wish to increase their therapeutic skills and work more effectively with lgbt clients this book shows how to help clients reach their goals in tangible respectful ways by identifying and emphasizing the hope resources and strength already present within this population readers will increase their knowledge about the practical application of sbft through case examples and transcripts modified directly from the author s work with the lgbt community and by learning more about the miracle question exceptions scaling compliments coping homework and more

Teaching Engineering 2015

this book aims to cover all aspects of teaching engineering and other technical subjects it presents both practical matters and educational theories in a format that will be useful for both new and experienced teachers

Clinical Nursing Calculations 2024-02-29

clinical nursing calculations third edition is an essential text for teaching dosage calculation to undergraduate nursing students the text employs the case approach which is a step by step method for performing dosage calculations the author team draws from extensive experience across the continuum of care to bring readers a truly informative and dynamic resource clinical nursing calculations has been expertly organized into four sections for easy navigation mathematics overview principles of medication administration basic dosage and intravenous calculations and advanced calculations in addition to clinical calculation coverage the text also features expanded content on nutrition insulin

pen calculations and the legal implications of medication administration the joint commission and the institute for safe medication practice guidelines regarding safe medication administration are also featured to facilitate learning students will find examples in both electronic medication administration record emar and electronic health record format this text can be used as a primary text for a dosage calculations course or as a supplemental text within a nursing program or pharmacology course

Theory of Computation 2006-09-19

this textbook is uniquely written with dual purpose it cover cores material in the foundations of computing for graduate students in computer science and also provides an introduction to some more advanced topics for those intending further study in the area this innovative text focuses primarily on computational complexity theory the classification of computational problems in terms of their inherent complexity the book contains an invaluable collection of lectures for first year graduates on the theory of computation topics and features include more than 40 lectures for first year graduate students and a dozen homework sets and exercises

Introduction to Signal Processing, Instrumentation, and Control **2016-01-11**

this book stems from a unique and highly effective approach in introducing signal processing instrumentation diagnostics filtering control and system integration it presents the interactive industrial grade software testbed of mold oscillator that captures the mold motion distortion induced by coupling of the electro hydraulic actuator nonlinearity with the resonance of the mold oscillator beam assembly the testbed is then employed as a virtual lab to generate input output data records that permit unraveling and refining complex behavior of the actual production system through merging dynamics signal processing instrumentation and control into a coherent problem solving package the material is presented in a visually rich mathematically and graphically well supported but not analytically overburdened format by incorporating software testbed into homework and project assignments the book fully brings out the excitement of going through the adventure of exploring and solving a mold oscillator distortion problem while covering the key signal processing diagnostics instrumentation modeling control and system integration concepts the approach presented in this book has been supported by two education advancement awards from the college of engineering of the university of illinois at urbana champaign

these are my lecture notes from cs381 481 automata and computability theory a one semester senior level course i have taught at cornell university for many years i took this course myself in the fall of 1974 as a first year ph d student at cornell from juris hartmanis and have been in love with the subject ever since the course is required for computer science majors at cornell it exists in two forms cs481 an honors version and cs381 a somewhat gentler paced version the syllabus is roughly the same but cs481 goes deeper into the subject covers more material and is taught at a more abstract level students are encouraged to start off in one or the other then switch within the first few weeks if they find the other version more suitable to their level of mathematical skill the purpose of the course is twofold to introduce computer science students to the rich heritage of models and abstractions that have arisen over the years and to develop the capacity to form abstractions of their own and reason in terms of them

death and taxes come later what seems inevitable for children is the idea that after spending the day at school they must then complete more academic assignments at home the predictable results stress and conflict frustration and exhaustion parents respond by reassuring themselves that at least the benefits outweigh the costs but what if they don't in the homework myth nationally known educator and parenting expert alfie kohn systematically examines the usual defenses of homework that it promotes higher achievement reinforces learning and teaches study skills and responsibility none of these assumptions he shows actually passes the test of research logic or experience so why do we continue to administer this modern cod liver oil or even demand a larger dose kohn's incisive analysis reveals how a mistrust of children a set of misconceptions about learning and a misguided focus on competitiveness have all left our kids with less free time and our families with more conflict pointing to parents who have fought back and schools that have proved educational excellence is possible without homework kohn shows how we can rethink what happens during and after school in order to rescue our families and our children's love of learning

the main purpose of this research topic is to analyze and identify the main family and contextual variables that are involved in the process of carrying out homework this will require studying the role played by teachers students and families in order to ensure that schoolwork is a useful learning tool although the role of the student is obviously crucial in homework research has focused on the cumulative time spent by the student carrying out homework however the time spent on homework is not in itself evidence of the student's involvement nor is time spent indicative of quality time indeed an excess of time can sometimes denote low competence in a field of knowledge while spending less time on homework could be indicative of high competence it is more likely that a high dedication of time spent on homework reflects high motivation or comprehension deficits rather than commitment to learning or academic motivation in tandem with the role of the student teachers as responsible for prescribing homework assignments for students also become central players in the process of completing homework assignments the decisions that teachers make about homework prescriptions and the amount and type of tasks they set will determine to a large extent the quality of the homework process including the student's motivation and the student's level of engagement with homework furthermore the fact that homework is useful interesting and motivating for students will depend on how the teacher prescribes those tasks and the connection established with classroom learning teacher feedback also acquires particular relevance for this point by helping the students to accurately estimate the quality of their progress and overcome the difficulties they may have encountered in carrying out their homework lastly the effectiveness of teacher

feedback depends on its contribution to the student s educational progress and how that student will perform in the future in addition to the student who performs the task and the teacher who prescribes and corrects it we must not lose sight of parents role although there are discrepancies regarding the role that parents play in relation to homework it is evident that their implication has important consequences not only on the final result of those tasks but also on the very process of carrying them out everything seems to indicate that the family environment and more specifically the support and feedback provided by parents is a factor that can determine the involvement of students in school duties in this way providing emotional support encouraging children to get involved can contribute positively to improving their motivation and interest in the performance of homework the objective of this research topic is to provide researchers and professionals in psychology and education settings with some of the most recent empirical evidence regarding the homework process its prescription and correction overall we aim to cease making homework a source of conflict and controversy at the socio educational level in order to provide useful instruments for improving the quality of student learning this work was developed with the financing of the research projects edu2013 44062 p mineco edu2017 82984 p meic

is homework an essential component of rigorous schooling or a harmful practice that alienates and discourages a significant number of students the debate over homework has gone on for decades but schools and families have changed in many ways and as author cathy vatterott notes there is a growing suspicion that something is wrong with homework rethinking homework best practices that support diverse needs examines the role homework has played in the culture of schooling over the years how such factors as family life the media and the balance movement have affected the homework controversy and what research and educators common sense tells us about the effects of homework on student learning the best way to address the pro and anti homework controversy is not to eliminate homework instead the author urges

educators to replace the old paradigm characterized by longstanding cultural beliefs moralistic views the puritan work ethic and behaviorist philosophy with a new paradigm based on the following elements designing quality homework tasks differentiating homework tasks deemphasizing grading of homework improving homework completion and implementing homework strategies and support programs numerous examples from teachers and schools that have revised their practices and policies for homework illustrate the new paradigm in action the end product is homework that works for all students at all levels
