in 1991 william croft suggested that negative existentials typically lexical expressions that mean not exist not have are one possible source for negation markers and gave his hypothesis the name negative existential cycle nec it is a variationist model based on cross linguistic data for a good twenty years following its formulation it was cited at face value without ever having been tested by historical comparative data over the last decade ljuba veselinova has worked on testing the model in a comparative perspective and this edited volume further expands on her work the collection presented here features detailed studies of several language families such as bantu chadic and indo european a number of articles focus on the micro variation and attested historical developments within smaller groups and clusters such as arabic mandarin and cantonese and nanaic finally variation and historical developments in specific languages are discussed for ancient hebrew ancient egyptian moksha mordvin uralic bashkir turkic kalmyk mongolic three pama nyungan languages o dam southern uto aztecan and tacana takanan amazonian bolivia the book is concluded by two chapters devoted to modeling cyclical processes in language change from different theoretical perspectives key notions discussed throughout the book include affirmative and negative existential constructions the expansion of the latter into verbal negation and subsequently from more specific to more general markers of negation nominalizations as well as the uses of negative existentials as standalone negative answers figure among the most frequent pathways whereby negative existentials evolve as general negation markers the operation of the negative existential cycle appears partly genealogically conditioned as the cycle is found to iterate regularly within some families but never starts in others as is the case in bantu in addition other special negation markers such as nominal negators are found to undergo similar processes i e they expand into the verbal domain and thereby develop into more general negation markers the book provides rich information on a specific path of the evolution of negation on cyclical processes in language change and it show cases the historical comparative method in a modern setting

1857

expressing negation is a universal property of all human languages there is considerable variation however in the exact ways negation materializes cross linguistically strict negative concord differs both from the negative polarity item strategy and the asymmetric negative concord strategy in that the sentence becomes negative only if the sentence negator is overtly expressed in it irrespective of how many negative expressions are used the central aim of this book is to describe strict negative concord in some slavic and finno ugric languages in particular the volume gives an insight into the forms strict negative concord manifests itself in russian polish czech slovenian slavic finnish hungarian mari finno ugric and the closely related selkup samoyedic to a wide linguistic community it aims to create a platform for comparison with similar phenomena in well described european languages

The Negative Existential Cycle

2022-12-20

this book presents a novel overarching account of negation and negative dependencies based on novel data from language variation language acquisition and language change negation is a universal property of natural language but languages can significantly differ in how they express it there is variation in the form and position of negative elements the number of manifestations of negative morphemes and in the restrictions on the use of negative and positive polarity items in this volume hedde zeijlstra explores the hypothesis that all known syntactic semantic

pragmatic and lexical ways of encoding dependencies should be also be attested in the domain of negation unless they are independently ruled out he shows that the pluriform landscape of negative dependencies and markers of negation that emerges has broader implications for theories of syntax and semantics and their interface

Strict Negative Concord in Slavic and Finno-Ugric

2024-06-04

while universally present in languages negation is well known to manifest a surprising cross linguistic diversity of forms in creole languages however negation and negative dependencies have been regarded as largely uniform creole languages as Bickerton claims in roots of language generally exhibit negative concord a construction popularly dubbed double negation where several expressions each negative on its own come together with a logic defying single negation interpretation while this construction problematic for compositionality if the meaning of sentences emerge from the meaning of their parts has fostered much research the fertile data terrain that creole languages offer for its understanding is rarely taken into account aiming at bridging this gap this book offers a wealth of theoretically informed empirical investigations of negative relations in a wide variety of creole languages uncovering a far more complex negative landscape than previously assumed the book reveals the challenging richness that a thorough comparative study of creoles delivers

Negation and Negative Dependencies

2022-10

learning how to live in today's new social and cultural environment will require examination trial and error and adaptation over time but there are ways to live with integrity and follow Christ today even in a negative world from a peak in church attendance in the mid 20th century Christianity has been on a trajectory of decline in the United States once positive toward Christianity and Christian moral teachings cultural shifts toward the mid 90s led many to adopt a more neutral tone toward the Christian faith seeing it as one option among many in a pluralistic public square today however Christianity is viewed negatively and being known as a Christian often means a lower social status in elite society Christian morality is openly repudiated and viewed as a threat to the new moral order in life in the negative world author Aaron M. Renn looks at the lessons from Christian cultural engagement over the past 70 years and suggests specific strategies for churches institutions and individuals to live faithfully in the negative world a culture opposed to Christian values and teachings and since there is no one size fits all solution living as a follower of Christ in the new negative world and being missionally engaged will require a diversity of strategies

Negation and Negative Concord

2018-12-15

there is no more important lesson in life to understand than it is your thoughts that create your reality your thoughts create your feelings emotions behavior and what you attract and magnetize into your life many people think that we see with our eyes the truth is we see through our consciousness minds and belief system there are in truth only two philosophies and feelings and emotions in life the philosophy and feeling of fear and the philosophy and feeling of love the key to realizing God is to only think and feel from your love based spiritual Christ Buddha mind this is why the Bible states let this mind be in you that was in Christ Jesus it is by mastering our mind that all negative feeling and emotions can be released and one can learn to live in self mastery centeredness unconditional love joy peace forgiveness nonjudgmentalness and equanimity at all times

1894

this book examines turn taking in english and japanese conversations and political news interviews to investigate the relationship between language and interaction

The ADHD Handbook

2014-03-01

in the contemporary information society organisations increasingly rely on the collection and analysis of large scale data popularly called big data to make decisions these processes which take place largely beyond the individual s knowledge produce a cascade of effects that go beyond privacy and data protection should we focus on the possibilities of tackling these often negative effects through other areas of law or maybe even find new solutions to cope with the dark side of big data this ground breaking book is the first to address this crucially important question in detail among the issues raised in the analysis are such vital elements as the following what is meant by big data privacy according to the european court of human rights and the court of justice of the european union what the european union legal framework on privacy and data protection consists of and how it functions in the light of big data what companies governments and other organisations are permitted to do with big data under the current regulatory framework the central importance of personal autonomy circumstances that influence whether or not the right to privacy is triggered big data s possible impact on democracy through inter alia potentially limiting freedom of expression how governmental or corporate surveillance chills the receiver s gathering of information and ideas selective offering of choices or information or manipulation of people s ideas procedural aspects that influence the extrapolation of normative concepts of privacy and data protection and how discrimination occurs in big data this book foregrounds a critical scrutiny of commercial uses of big data its scale its limited capacity for independent oversight and the expected prevalence of interference with individuals rights the author s conclusions explore possible legal alternatives to mitigate the negative impact of big data using legal instruments case law and legal academic literature in her analysis because the amount of digital data keeps growing and the private lives of individuals are increasingly taking place online and because of the opacity of the big data process the fundamental values that are at stake and the speed of technological developments compared to the pace of legal reform this comprehensive assessment of flaws in the current framework and possible practical solutions will be warmly welcomed by practitioners policymakers and government officials in all legal fields related to privacy and data protection

2012-10-25

this book constitutes the refereed proceedings of the 5th international workshop on experimental and efficient algorithms wea 2006 held in menorca spain may 2006 the book presents 26 revised full papers together with 3 invited talks the application areas addressed include most fields applying advanced algorithmic techniques such as combinatorial optimization approximation graph theory discrete mathematics scheduling searching sorting string matching coding networking and more

Self and Non-Self in Early Buddhism

2012-10-25

this textbook approaches second language acquisition from the perspective of generative linguistics roumyana slabakova reviews and discusses paradigms and findings from the last thirty years of research in the field focussing in particular on how the second or additional language is represented in the mind and how it is used in communication the adoption and analysis of a specific model of acquisition the bottleneck hypothesis provides a unifying perspective the book assumes some non technical knowledge of linguistics but important concepts are clearly introduced and defined throughout making it a valuable resource not only for undergraduate and graduate students of linguistics but also for researchers in cognitive science and language teachers

The Pacific Reporter

1890

forty years after his death hans kelsen 1881 1973 remains one of the most discussed and influential legal philosophers of our time this collection of new essays takes kelsen s pure theory of law as a stimulus aiming to move forward the debate on several central issues in contemporary jurisprudence the essays in part i address legal validity the normativity of law and kelsen s famous but puzzling idea of a legal system s basic norm part ii engages with the difficult issues raised by the social realities of law and the actual practices of legal officials part iii focuses on conceptual features of legal systems and the logical structure of legal norms all the essays were written for this volume by internationally renowned scholars from seven countries also included in english translation is an important polemical essay by kelsen himself

Answers

2014-12-24

questionnaires are widely used in the social sciences and very often survey data form the basis for governmental and commercial planning or evaluation yet the quality of survey data is not attested to since a large variety of factors in the language use situation prove to influence the answers unintentionally the forbid allow asymmetry is a well known example of this when respondents are asked whether something should be forbidden about 50 may answer yes forbid whereas an equivalent question phrased with the verb to allow could well cause up to 75 of the respondents to answer no it should not be allowed which question wording is preferable to measure respondents true attitudes only when we know why the answers differ can we decide on that this book is the first to apply a systematic cognitive approach to describe the causes of the forbid allow asymmetry the question answering process is unravelled by a variety of experiments and meta analytic techniques analyses reveal that the difference in question wording does not prompt respondents to retrieve different attitudes instead the asymmetry reflects that the question wording causes the response options to be used differently because of the qualifying dimensions in the question text the meanings of yes and no change as well as the cognitive distance between them this study sheds a different light on processes of question answering and text interpretation furthermore practical advice on questionnaire design and on the interpretation of survey data is given on the basis of these new insights

Studies in Language and Social Interaction

2003-01-30

this book analyzes talcott parsons largest scale effort to overcome the relativism and subjectivism of the social sciences harold j bershady sets forth parsons version of the characteristics desirable for social knowledge showing that parsons deems the relativistic and subjectivistic arguments as powerful challenges to the validity of social knowledge bershady maintains that all parsons intellectual labors exhibit a deep and abiding concern for social knowledge from his first major work in the 1930s to his later writings on social evolution parsons theoretical aim has been to provide an unassailable answer to the question how is social knowledge possible ideological criticisms of parsons work bershady argues not only miss his awareness of ideological influences upon social thought but also miss the logical and epistemological strands of his thinking this book sheds light on the persistent importance of the work of a major theoretical sociologist of the twentieth century it also brings into the open and discusses issues of deepest concern to the philosophy and methodology of all of the social sciences
