of thumb but we have always attempted to only include recommendations that can be supported by research the third theme of teaching and learning at a distance is derived from richard clark s famous quote published in the review of educational research that states that media are mere vehicles that do not directly influence achievement clark s controversial work is discussed in the book but is also fundamental to the book s advocacy for distance education in other words we authors did not make the claim that education delivered at a distance was inherently better than other ways people learn distance delivered instruction is not a magical approach that makes learners achieve more the fourth theme of the book is equivalency theory here we presented the concept that instruction should be provided to learners that is equivalent rather than identical to what might be delivered in a traditional environment equivalency theory helps the instructional designer approach the development of instruction for each learner without attempting to duplicate what happens in a face to face classroom the final theme for teaching and learning at a distance is the idea that the book should be comprehensive that it should cover as much of the various ways instruction is made available to distant learners as is possible it should be a single source of information about the field an essential guide for all teachers learning to teach not just for beginners offers a wealth of great strategies for all those who desire to instruct others as a career teachers often assume students know how to do research however most students lack important information literacy skills and often need guidance in order to be successful researchers sometimes the research projects students are assigned are not well devised or planned and teachers often underestimate the amount of time or effort necessary to complete a project these difficulties soon become compounded because students often have poor organizational and time management skills which are essential in producing good research projects the desire to make the research experience pleasant and worthwhile for students and the teacher who must assess their efforts has led authors chris carlson and ellen brosnahan to devise a logical system to help students not only gain valuable information literacy and time management skills needed but also to help the instructor have a better handle on what students are doing during the process information literacy takes readers systematically through the management of a research activity from conception to final product each chapter includes handouts that have been used by the authors with actual research assignments websites for further information and a bibliography of additional books that support the ideas in the chapter an appendix with examples of research papers that have been done by the authors actual students is also included this book takes a developmental perspective at the use of scoring rubrics to assess student work citing developmental characteristics of each age the author presents examples and adaptations of assessment rubrics on a variety of subjects for teachers from kindergarten through adult college after a presentation of foundation information on rubrics separate chapters are devoted to each grade level from primary through adult written so that each chapter can be addressed independently the book provides additional chapters devoted to assessing technological topics and using rubrics with students with special needs the final chapters provide practical information to help teachers to create their own rubrics and to covert rubric scores to letter grades an updated annotated listing of recommended rubric websites is included

Teaching and Learning at a Distance 2019-07-01

teaching and learning at a distance is written for introductory distance education courses for preservice or in service teachers and for training programs that discuss teaching distant learners or managing distance education systems this text provides readers with the basic information needed to be knowledgeable distance educators and leaders of distance education programs the teacher or trainer who uses this book will be able to distinguish between appropriate uses of distance education in this text we take the following themes the first theme is the definition of distance education before we started writing the first edition of teaching and learning at a distance we carefully reviewed the literature to determine the definition that would be at the foundation of our writing this definition is based on the work of desmond keegan but is unique to this book this definition of distance education has been adopted by the association for educational communications and technology and by the encyclopedia britannica the second theme of the book was the importance of research to the development of the contents of the book the best practices presented in teaching and learning at a distance are validated by scientific evidence certainly there are rules of thumb but we have always attempted to only include recommendations that can be supported by research the third theme of teaching and learning at a distance is derived from richard clark s famous quote published in the review of educational research that states that media are mere vehicles that do not directly influence achievement clark s controversial work is discussed in the book but is also fundamental to the book s advocacy for distance education in other words we authors did not make the claim that education delivered at a distance was inherently better than other ways people learn distance delivered instruction is not a magical approach that makes learners achieve more the fourth theme of the book is equivalency theory here we presented the concept that instruction should be provided to learners that is equivalent rather than identical to what might be delivered in a traditional environment equivalency theory helps the instructional designer approach the development of instruction for each learner without attempting to duplicate what happens in a face to face classroom the final theme for teaching and learning at a distance is the idea that the book should be comprehensive that it should cover as much of the various ways instruction is made available to distant learners as is possible it should be a single source of information about the field

teachers often assume students know how to do research however most students lack important information literacy skills and often need guidance in order to be successful researchers sometimes the research projects students are assigned are not well devised or planned and teachers often underestimate the amount of time or effort necessary to complete a project these difficulties soon become compounded because students often have poor organizational and time management skills which are essential in producing good research projects the desire to make the research experience pleasant and worthwhile for students and the teacher who must assess their efforts has led authors chris carlson and ellen brosnahan to devise a logical system to help students not only gain valuable information literacy and time management skills needed but also to help the instructor have a better handle on what students are doing during the process information literacy takes readers systematically through the management of a research activity from conception to final product each chapter includes handouts that have been used by the authors with actual research assignments websites for further information and a bibliography of additional books that support the ideas in the chapter an appendix with examples of research papers that have been done by the authors actual students is also included
