adding a constant to both sides each of the first four sections focuses on a different operation this allows students to master one technique at a time a review section mixes the four operations together the next section combines operations together for example it may be necessary to first subtract a number from both sides and then divide both sides by a number students next learn how to add the unknown to both sides of the equation in order to solve the problem the last section offers ample practice with equations of the form $3x + 8 = 23$ $2x +$ students must add or subtract both constants and unknowns to from both sides of the equation in order to solve these problems
