of brian c taylor from 2006 to 2013 this anthology contains everything of value written so far this collection also has unpublished works formerly unavailable online or in book form the black conservative an american hero by richard jules valvano can a powerful piece of fiction undo the negative stereotyping cast on a group of individuals and make them noble and heroic in this riveting and explosive novel the author is betting it will for years the black left has cast politically conservative african americans as insensitive traitors to the civil rights movement they are seen as unhinged thinkers who dare to question liberal conventional wisdom concerning black matters and issues they are often depicted as uncle toms and whites in dark skin who actually want blacks to be passive porters shoe shiners and doormats in a white society the black conservative an american hero not only challenges these stereotypes it does it by way of an engaging thriller filled with fascinating characters the entire effect is meant to give black conservatives a human element an insight into their thinking and a culmination of a renewed and invigorating image of them it is difficult to find an area of public policy more plagued by misunderstanding than energy policy even worse every time the subject is raised we are obligated to get mired in pointless arguments about the weather this book helps set the record straight not convinced consider some of these inconvenient truths the cost of green energy climate remediation is anywhere from 10 to 1 000 times greater than the damage from the climate change it attempts to alleviate germany the worlds

leader in solar energy will spend more than 280 billion by 2030 on solar subsidies but all of that investment will only forestall 22nd century global warming by 37 hours obamas carbon tax would cost americans 1 2 trillion over just ten years but it would only reduce the midrange 3 degree modeled 22nd century global temperature increase by 0 038 degrees celsius at their current emissions growth rate it will take china nine months to replace the entire u s emissions cut that obama wants to achieve over seven years at a staggering cost in american jobs and lost economic growth the u s biofuel program imposes a cost on consumers 9 862 times greater than any climate benefit they or their distant progeny will ever derive this is not another skeptical global warming polemic but an economic evaluation of how and why green energy will fail the world has too many pressing needs for the money obama squandered on just a single bankrupt crony solar company the u s could have prevented 300 000 childhood malaria deaths in poor countries a thoroughly researched heavily documented book by an expert in his field it will demonstrate in meticulous detail how wasteful and economically inefficient obamas green energy dead end future will be compared to other worthy alternatives its time to end the hysterical climate cynicism and get on humanitys side performance evaluation is a critical stage of software and hardware system development that every computer engineer and scientist should master although complex requiring skills in mathematics measurement techniques and simulation performance evaluation is primarily an art indeed

the most difficult stage in a performance analysis is defining the approach once you know what to do it is less difficult to define a plan of attack with your familiar software tools we present a set of topics which we believe should be part of every engineer's intellectual toolkit this includes the statistical exploitation of numerical results in an efficient and ethical way for example how to summarize variability or fairness what transient removal in a simulation is and how to make predictions from a time series we also present well known performance patterns which helps to quickly bring the engineer to the main issues for queuing theory we focus on a subset of very useful results such as operational laws a highlight of the book is the development of palm calculus also called the importance of the viewpoint which is central to queuing theory indeed this topic has so many applications to simulation and to system analysis in general that it is a very good time investment this book began as a set of lecture notes for a course given at epfl in this book padma desai makes the complexities of economic policy and financial reform accessible to a wide audience merging a compelling narrative with scholarly research she begins with a systematic breakdown of the factors leading to america's recent recession describing the monetary policy tax practices subprime mortgage scandals and lax regulation that contributed to the crisis she also discusses the treasury fed rescue deals that saved several financial institutions and the involvement of congress in passing restorative policies desai follows with an analysis of stress tests and other

economic measures and she frankly assesses whether the u s economy is truly on the mend expanding her view she considers the prospects for recovery in north america as a whole as well as in europe asia and south america and the extent and value of u s and e u regulatory proposals refocusing on american financial practices desai evaluates hedge funds and derivatives credit default swaps and rating agencies pondering whether the dollar can remain a reserve currency she concludes with a historical comparison of the great depression and the great recession weighing the effect of the economic collapse on the future of american capitalism from the new york times best selling author of the black friend and a seasoned activist comes an indispensable guide to social and political progressivism for young people and anyone wanting to get more involved what is disinformation and how does it influence our lives how did the wealth gap become so staggeringly wide why do so many americans lack access to quality health care and most importantly what can we do about it all through a combination of personal anecdotes and interviews authors frederick joseph and porsche joseph make a compelling case for tackling some of the biggest issues of our day from gun violence the prison system transphobia and indigenous land theft to climate change education housing and immigration covering sixteen topics and featuring more than two dozen interviews with prominent activists authors actors and politicians this is the essential resource for those who want to make the world better than we found it featuring interviews with mehcad brooks keah

it is difficult to find an area of public policy more plagued by misunderstanding than energy policy even worse every time the subject is raised we are obligated to get mired in pointless arguments about the weather this book helps set the record straight not convinced consider some of these inconvenient truths the cost of green energy climate remediation is anywhere from 10 to 1 000 times greater than the damage from the climate change it attempts to alleviate germany the worlds leader in solar energy will spend more than 280 billion by 2030 on solar subsidies but all of that investment will only forestall 22nd century global warming by 37 hours obamas carbon tax

would cost americans 1 2 trillion over just ten years but it would only reduce the midrange 3 degree modeled 22nd century global temperature increase by 0 038 degrees celsius at their current emissions growth rate it will take china nine months to replace the entire u s emissions cut that obama wants to achieve over seven years at a staggering cost in american jobs and lost economic growth the u s biofuel program imposes a cost on consumers 9 862 times greater than any climate benefit they or their distant progeny will ever derive this is not another skeptical global warming polemic but an economic evaluation of how and why green energy will fail the world has too many pressing needs for the money obama squandered on just a single bankrupt crony solar company the u s could have prevented 300 000 childhood malaria deaths in poor countries a thoroughly researched heavily documented book by an expert in his field it will demonstrate in meticulous detail how wasteful and economically inefficient obamas green energy dead end future will be compared to other worthy alternatives its time to end the hysterical climate cynicism and get on humanitys side
