## Mind in Life

2010-09-30

how is life related to the mind thompson explores this so called explanatory gap between biological life and consciousness drawing on sources as diverse as molecular biology evolutionary theory artificial life complex systems theory neuroscience psychology continental phenomenology and analytic philosophy ultimately he shows that mind and life are more continuous than previously accepted and that current explanations do not adequately address the myriad facets of the biology and phenomenology of mind

## The Phenomenon of Life

2001

one of the most prominent thinkers of his generation hans jonas wrote on topics as diverse as the philosophy of biology ethics and cosmology this work sets forth a systematic philosophy of biological facts laid out in support of his claim that mind is prefigured throughout organic existence

## *Phenomenology of Life – From the Animal Soul to the Human Mind*

2007-08-14

the challenge presented by the recent tendencies to naturalize phenomenology on the basis of the progress in biological and neurological sciences calls for an investigation of the traditional mind body problem the progress in phenomenological investigation is up to answering that challenge by placing the issues at stake upon a novel platform that is the ontopoiesis of life

## Phenomenology of Life – From the Animal Soul to the Human Mind

2010-11-30

transcendental phenomenology presumed to have overcome the classic mind body dichotomy in terms of consciousness should we indeed dissolve the specificity of human consciousness by explaining human experience in its multiple sense giving modalities through the physiological functions of the brain the present collection of studies addresses this crucial question challenging such naturalizing reductionism from multiple angles

## ***Ecology of the Brain***

2018

present day neuroscience places the brain at the centre of study but what if researchers viewed the brain not as the foundation of life rather as a mediating organ ecology of the brain addresses this very question it considers the human body as a collective a living being which uses the brain to mediate interactions those interactions may be both within the human body and between the human body and its environment within this framework the mind is seen not as a product of the brain but as an activity of the living being an activity which integrates the brain within the everyday functions of the human body going further fuchs reformulates the traditional mind brain problem presenting it as a dual aspect of the living being the lived body and the subjective body the living body and the objective body the processes of living and experiencing life fuchs argues are in fact inextricably linked it is not the brain but the human being who feels thinks and acts for students and academics ecology of the brain will be of interest to those studying or researching theory of mind social and cultural interaction psychiatry and psychotherapy

## **Life – The Outburst of Life in the Human Sphere**

2013-03-09

science and philosophy have both undergone radical transformations in recent times now they are poised for a pivotal alliance science has abandoned the mechanistic model of nature philosophy has broken through the tight traditional circle of conceptualisation intellectualistic preconceptions and cognitive presuppositions the two now meet to focus on the palpitating fluctuating stream of nature life their traditional prejudices dispersed under the pressure of new evidence philosophy phenomenology of life and the sciences of life meet in the archimedean point of the human creative condition proper to the phenomenology of life and the role of the human subject central to the scientific view of reality they necessitate each other without the sciences of life philosophy phenomenology of life cannot penetrate the intricacies of nature life without recourse to philosophy to delineate design provide clues to the organisation of natural evidence the sciences of life cannot devise new strategies for inquiry nor survey their field the present collection throws open the barriers that separate nature and culture works of physis and those of the spirit following the philosophical model of the onto-poiesis of life focusing on its specifically human sphere that of the human self interpretation in existence it encircles the vast new horizons of the new alliance

## **The Origins of Life**

2013-03-09

life appears ungraspable yet its understanding lies at the heart of current preoccupations in our attempt to understand life through its origins the ambition of the present collection is to unravel the network of the origin of the various spheres of sense that carry it onwards the primogenital matrix of generation tymieniecka elaborated as the fulcrum of this collection elucidates the main riddles of the scientific philosophical controversies concerning the status of various spheres that seek to make sense of life

## **Life Energies, Forces and the Shaping of Life: Vital, Existential**

2012-12-06

the nature of life consists in a constructive becoming see analecta husserliana vol 70 though caught up in its relatively stable stationary intervals manifesting the steps of its accomplishments that our attention is fixed in this selection of studies we proceed in contrast to envisage life in the aristotelian perspective in which energia forces and dynamisms of life at work are at the fore startling questions emerge what distinction could be drawn between the prompting forces of life and its formation or is this distinction a result of our transcendental faculties the answers to these questions reveal themselves as tymieniecka proposes at the phenomenologically ontopoietic level of life s origination where transcendentalit y surges

## **Phenomenology of Life – From the Animal Soul to the Human Mind**

2007-08-23

transcendental phenomenology presumed to have overcome the classic mind body dichotomy in terms of consciousness should we indeed dissolve the specificity of human consciousness by explaining human experience in its multiple sense giving modalities through the physiological functions of the brain the present collection of studies addresses this crucial question challenging such naturalizing reductionism from multiple angles

## **Life Scientific Philosophy, Phenomenology of Life and the Sciences of Life**

2013-03-09

this collection brings to the public the fruits of the groundlaying work on the philosophy phenomenology of life presented in some 30 volumes of the analecta husserliana and inaugurates a new phase in philosophy phenomenology a truly radical turn as tymieniecka in her introduction puts it the time is ripe to abandon the prejudices against empiria and set aside in a second position the epistemological constitutive criterion of validity and truth without however abandoning it to the contrary recognising with our present

culture the overwhelmingly superior validity of the pragmaticity test which science indubitably applies in its verification of technology philosophy phenomenology at last reaches the full significance of reality the fullness of the vital fact of life which comprises not only the works and enjoyment of the mind and the spirit but those of the bios and the cosmos too the full fledged dialogue with the hard core sciences opens up philosophy of life and the human creative condition draws together all the radiations of life into its field of inquiry tymieniecka thus proposes a new mathesis universalis the dream of leibniz and husserl which can at least be fulfilled

## ***Levels of Organic Life and the Human***

2019-07-02

the groundbreaking classic of twentieth century german philosophy now available in english with an introduction by j m bernstein helmuth plessner s levels of organic life and the human draws on phenomenological biological and social scientific sources to offer a systematic account of nature life and human existence the book considers non living nature plants non human animals and human beings a sequence of increasingly complex modes of boundary dynamics simply put interactions between a thing s insides and the surrounding world living things are classed and analyzed by their positionality or orientation to and within an environment according to plessner s radical view the human form of life is excentric that is the relation between body and environment is something to which humans themselves are positioned and can take a position this excentric positionality enables human beings to take a stand outside the boundaries of their own body a possibility with significant implications for knowledge culture religion and technology a powerful and sophisticated account of embodiment the levels shows with reference both to science and to philosophy how life can be seen on its own terms to establish its own boundaries and how from the standpoint of life the human establishes itself in relation to the nonhuman as such the book is not merely a historical monument but a source for invigorating a range of vital current conversations around the animal posthumanism the material turn and the biology and sociology of cognition

## **Life Scientific Philosophy, Phenomenology of Life and the Sciences of Life**

1999-03-31

this collection brings to the public the fruits of the groundlaying work on the philosophy phenomenology of life presented in some 30 volumes of the analecta husserliana and inaugurates a new phase in philosophy phenomenology a truly radical turn as tymieniecka in her introduction puts it the time is ripe to abandon the prejudices against empiria and set aside in a second position the epistemological constitutive criterion of validity and truth without however abandoning it to the contrary recognising with our present culture the overwhelmingly superior validity of the pragmaticity test which science indubitably applies in its verification of technology philosophy phenomenology at last reaches the full significance of reality the fullness of the vital fact of life which comprises not only the works and enjoyment of the mind and the spirit but those of the bios and

the cosmos too the full fledged dialogue with the hard core sciences opens up philosophy of life and the human creative condition draws together all the radiations of life into its field of inquiry tymieniecka thus proposes a new mathesis universalis the dream of leibniz and husserl which can at least be fulfilled

## **Phenomenology of Life from the Animal Soul to the Human Mind: The human soul in the creative transformation of the mind**

2007

this book offers a unique description of how phenomenology can help professionals from medical environmental and social fields to explore notions such as interaffectivity empathy epoche reduction and intersubjective encounter written by a group of top scholars it uniquely covers the relationship between phenomenology and bioethics and focuses not only on medical cases but also on the environment and emerging technologies this variety of themes whilst including techno ethics environmental ethics animal ethics and medical ethics is conducive to appreciating broadly how phenomenology can improve our quality of our life despite its difficult themes the book appeals to an audience of both academics and professionals who are willing to understand how to increase the quality of care in their professional field chapter 8 is available open access under a creative commons attribution 4 0 international license via link springer com

## **Phenomenology of Bioethics: Technoethics and Lived-Experience**

2021-03-05

the concepts of form and function have traditionally been defined in terms of biology and then extended to other disciplines stephen t asma examines the various interpretations of form and function in science and philosophy reflecting on the philosophical presuppositions underlying the work of geoffroy cuvier darwin and others in the continental tradition of canguilhem and foucault asma s treatment of the historical form function dispute analyzes the complex interactions among ideologies metaphysical commitments and research programs following form and function is a significant contribution to the history of science history of philosophy and disputes within contemporary biology

## **Life – Scientific Philosophy, Phenomenology of Life and the Sciences of Life**

1996

this book celebrates the investigative power of phenomenology to explore the phenomenological sense of space and time in conjunction with the phenomenology of intentionality the invisible the sacred and the mystical it examines the course of life through its ontopoietic genesis opening the cosmic sphere to logos the work also explores on the one hand the intellectual drive to locate our cosmic position in the universe and on the other the pull toward the infinite it intertwines science and its grounding principles with imagination in order to make sense of the infinite this work is the first of a two part work that contains papers presented at the 62nd international congress of phenomenology the forces of the cosmos and the ontopoietic genesis of life held in paris france august 2012 it features the work of scholars in such diverse disciplines as biology anthropology pedagogy and psychology who philosophically investigate the cosmic origins of beingness coverage in this first part includes toward a new enlightenment metaphysics as philosophy of life transformation in phenomenology husserl and tymieniecka biologically organized quantum vacuum and the cosmic origin of cellular life plotinus enneads and self creation the creative potential of humor transcendental morphology a phenomenological interpretation of human and non human cosmos and cognition and emotion from dichotomy to ambiguity

## Following Form and Function

2014-04-26

in the ancient indian epic mahabharata the lord of death asks what is the most wondrous thing in the world and his son answers it is that all around us people can be dying and we don t believe it can happen to us this refusal to face the inevitability of death is especially prevalent in modern western societies we look to science to tell us how things are but biomedicine and neuroscience divest death of any personal significance by presenting it as just the breakdown of the body and the cessation of consciousness the tibetan buddhist perspective stands in sharp contrast to this modern scientific notion of death this tradition conceives dying not as the mere termination of living processes within the body but as a rite of passage and transformation of consciousness physical death in this tradition initiates a transition from one of the six bardos in between states of consciousness to an opportunity for total enlightenment in dying what happens when we die evan thompson establishes a middle ground between the depersonalized scientific account of death and the highly ritualized notion of death found in tibetan buddhism thompson s depiction of death and dying offers an insightful neurobiological analysis while also delving into the phenomenology of death examining the psychological and spiritual effects of dying on human consciousness in a trenchant critique of the near death experience literature he shows that these experiences do not provide evidence for the continuation of consciousness after death but also that they must be understood phenomenologically and not in purely neuroscience terms we must learn to tolerate the ultimate ungraspability of death by bearing witness to dying and death instead of turning away from them we can learn to face the experience of dying through meditative practice and to view the final moments of life not as a frightening inevitability to be shunned or ignored but as a deeply personal experience to be accepted and even embraced

## **Phenomenology of Space and Time**

2014-09-02

from aristotle to the present memory has been grasped as a trace or impression of lost reality bridging physiological experience and consciousness philosophers have vainly sought the nature of this bridge the present day physiologizing naturalizing of consciousness is not resolving their congenital continuity in which the very existence and practice of life is rooted we have to change our approach erwin straus the aristotelian congenital ties between memory and temporality acquire crucial significance in our primogenital ontoipoiesis of life tymieniecka it reveals memory to be the factor that carries this coalescence and the becoming of life itself this can be the fruit only of the generative springs of life first phenomenology philosophy the ontoipoietic logos of life in this collection we explore memory in the constitution of reality remembering and interpretation consciousness action facts imagination history myths self realization metamorphosis

## **Dying: What Happens When We Die?**

2009-09-30

many children spend their first days weeks and sometimes months in a neonatal intensive care unit as a consequence of prematurity congenital anomalies or birth complications their medical needs are thoughtfully appraised and attended to yet some questions are rarely asked what experiences do these newborns have what experiences are we giving them how can we and do we understand what their lives are like what are the interventions and actions of medical care actually like for them michael van manen explores the experiential life of newborn infants with particular consideration for those newborns who require medical care drawing on contemporary research findings from physiology psychology biology and other disciplines he offers phenomenological insights and raises thought provoking questions as to how we ought to understand and care for such young children in our contemporary world it is often the experiences of inception of first contact with those who seem most distant foreign or even alien that we need to try to apprehend and understand the inceptual lives of newborn infants challenges us to explore those experiences phenomenologically to investigate the originary meanings of early life experiences phenomenology of the newborn is an essential text for researchers seeking to employ phenomenology for the study of neonatal life and related concerns that may seem inaccessible to other more traditional qualitative and quantitative methods

## ***Memory in the Ontopoiesis of Life***

2018-11-27

life appears ungraspable yet its understanding lies at the heart of current preoccupations in our attempt to understand life through its origins the ambition of the present collection is to unravel the network of the origin of the various spheres of sense that carry it onwards the primogenital matrix of generation tymieniecka elaborated as the fulcrum of this collection elucidates the main riddles of the scientific philosophical controversies concerning the status of various spheres that seek to make sense of life

## **Phenomenology of the Newborn**

2000-09-30

the volume encompasses three interrelated areas of phenomenological research person subject and organism the contributors intend to answer a number of inspiring and unexplored questions on husserlian phenomenology of personhood and subjectivity but also on broader problems including epistemological ontological and biological approaches

## **The Origins of Life**

2014

for more than three centuries scientists have studied the world as detached observers in doing so science has achieved marvelous results but it has also lost the sense of the whole that earlier cultures possessed by concentrating on the text of the physical world science has lost the context the etheric world of life forces goethean phenomenology so named for goethe s observations is a scientific method capable of bringing the clarity of natural science to this context of phenomena unconsciously scientific observers have always been using the context to read the text the phenomenological method involves training observers to look at the activity of thinking itself as it perceives intentionally it then uses this activity itself as a means of perception the observer thus becomes conscious that physical nature is indeed a text and that its meaning derives from the etheric context unlike the more common hypothetical and deductive methods which presuppose a detached observer the phenomenological method is based on active participation by the observer this eliminates the need to construct speculative hypotheses the observer s awareness of his or her own intentionality ensures the veracity of the observations the etheric world is not a new hypothesis it is however a new domain of observation the authors jochen bockemühl christof lindenau georg maier ernst august müller hermann poppelbaum dietrich rapp and wolfgang schad have all written extensively on participatory science and related matters in this ground breaking collection they each explore an aspect of the etheric world and its relationship to human thinking they systematically lead the reader into the formative movements of nature and offer genuine insight into the far reaching mystery of life

## The Yearbook on History and Interpretation of Phenomenology 2013

1985

creative force or creative shaping this unprecedented effort to plumb the workings of the onto-poiesis of life by disentangling its primordial forces and shaping devices as they enter into the originary matrixes of life yields fascinating insights prepared by the investigation of the first two matrixes the womb of life and sharing in life *analecta husserliana* volume 74 the present collection of essays focuses upon the third and crowning creative matrix *imaginatio creatrix* here proves itself to be the source and driving force which brings us to the origins of the human mind *human life studies* by elof axel carlson a t tymieniecka n milkov eldon c wait k rokstad m golaszewska m küle w kim rogers piotr mroz r pinilla burgos a carrillo canán g r ronsivalle j e smith a pawliszyn a rizzacasa l galzigna and m galzigna jiro watanabe m jakubczak k tarnowski m durst w pawliszyn r a kurenkova carmen cozma e supinska polit i s fiut gerald nyenhuis osvaldo rossi r d sweeney and d ulicka

### Toward a Phenomenology of the Etheric World

2012-12-06

lebensphilosophie central to nineteenth century philosophical thought is concerned with the meaning value and purpose of life in this much needed study historical lebensphilosophie is returned to the core of philosophical investigations and revealed in the contemporary ascendancy of life in philosophical thinking scholars from aesthetics bioethics and ontology examine how the notion of life has made its way into contemporary philosophical discussions they identify three main themes the shift toward biological and technological views of life altering dilthey and nietzsche s emphasis on historical life over biological life the relationship between biopolitics and political liberalism and the re emergence of the idea of life so important for the traditional life philosophers in recent discussions about care of the self existential gratitude skepticism and the emotions anticipating new directions of philosophical thinking this study restores a vital school of thought to crucial discussions about the dangers of contemporary politics and the threat of new technologies

### *The Creative Matrix of the Origins*

2013-07-04

offers an interdisciplinary investigation of affectivity in various forms of life *e co* affectivity is a philosophical investigation of affectivity in various forms of life photosynthesis and growth in plants touch and trauma in bird feathers the ontogenesis of human life through the placenta the bare interface of human skin and the porous materiality of soil

combining biology phenomenology ancient greek thought new materialisms environmental philosophy and affect studies marjolein oele thinks through the concrete living places that show the receptive responsive power of living beings to be affected and to affect she focuses on these localized interfaces to explain how affectivity emerges in places that are always evolving creative porous and fluid every interface is material but is also more than its current materiality in cocreating place time and being after extensively describing the effects of the milieu and community within which each example of affectivity takes place in the final chapter oele adds a prescriptive ethical lens that formulates a new epoch beyond the anthropocene one that is sensitive to the larger ecological communal concerns at stake this is a very welcome contribution to environmental philosophy the strikingly original thesis is evident in the book s title what we call ecology is a co affectivity the mutuality of affecting and being affected on the part of species biological kingdoms ecosystems etc here marjolein oele melds biology and ontology in new and creative ways enriching both fields her book performs the very theme it explores it stages a co affective relation between philosophy and the life sciences michael marder author of plant thinking a philosophy of vegetal life

## The Origins of Life

2020-04-01

philosophers have traditionally assumed that the difference between active and passive movement could be explained by the presence or absence of an intention in the mind of the agent this assumption has led to the neglect of many interesting active behaviors that do not depend on intentions including the mindless actions of humans and the

activities of non human animals in this book jones offers a broad account of agency that unifies these cases the book addresses a range of questions including when are movements properly attributed to whole agents rather than to their parts what does it mean for an agent to guide its action what distinguishes agents from other complex systems what is the relationship between action and adaptive behavior and why might the study of living systems be the key to understanding agency this book makes an important contribution to current philosophical debate on the nature and origins of agency it defines action as a uniquely biological process and recasts human intentional action as a specialized case of a broader and more common phenomenon than has been previously assumed uniting findings from philosophy cognitive science psychology biology computer science complexity theory and ethology this book will be of interest to students and scholars working in these areas

## **E-Co-Affectivity**

2023-10-25

in groundwork of phenomenological marxism crisis body world ian h angus investigates the crisis of reason in a contemporary context beginning with edmund husserl s the crisis of the european sciences and transcendental phenomenology angus connects the phenomenology of human motility to marx s ontology of labor in capital and shows its basis in natural fecundity excess he argues that the formalization of reason creates an inability to foster differentiated community as expected by both husserl and marx and that the formalization of human motility by the regime of value reveals the ontological productivity of natural fecundity showing that ecology is the contemporary exemplary science addressing the crisis requires a philosophy of technology especially digital technology and a dialogue between cultural civilizational lifeworlds which surpasses husserl s assumption that europe is the home of reason angus s overall conception of phenomenology is socratic in that it is concerned with the presuppositions and applications of knowledge forms in their lifeworld grounding he further shows that the contemporary event is the epochal confrontation between planetary technology and place based indigeneity this book lays out the fundamental concepts of a systematic phenomenological marxian philosophy

## ***Life***

2016-07-01

this is a bold brilliant provocative and puzzling work it demands a radical shift in standpoint an almost paradoxical posture in which living systems are described in terms of what lies outside the domain of descriptions professor humberto maturana with his colleague francisco varela have undertaken the construction of a systematic theoretical biology which attempts to define living systems not as they are objects of observation and description nor even as interacting systems but as self contained unities whose only reference is to them selves thus the standpoint of description of such unities from the outside i e by an observer already seems to violate the fundamental requirement

which maturana and varela posit for the characterization of such system namely that they are autonomous self referring and self constructing closed systems in short autopoietic systems in their terms yet on the basis of such a conceptual method and such a theory of living systems maturana goes on to define cognition as a biological phenomenon as in effect the very nature of all living systems and on this basis to generate the very domains of interaction among such systems which constitute language description and thinking
