to ask the right question one needs to have some idea of what the answer might be so it is with remediation there is no such thing as too much information when it comes to characterizing a site as information can aid in selecting the best remediation options unfortunately the collection of data for making an informed decision is often costly forcing professionals to make decisions on incomplete data the lack of accurate data can also lead to the wrong remediation method selections unwanted surprises and extra expense based on the author's more than 40 years of experience working on environmental projects *Remediation Manual for Contaminated Sites* provides a

practical guide to environmental remediation and cleanups it presents a broad overview of the environmental remediation process distilled into what one needs to know to evaluate a specific challenge or solve a remediation problem the text offers guidance on tasks that range from managing consultants and contractors to gathering data selecting a suitable remediation technology and calculating remediation costs the book includes remediation strategies for a variety of contaminants and examines a wide range of technologies for the remediation of water and soil including excavation wells drainage soil venting vapor stripping incineration bioremediation containment solidification vitrification and phytoremediation written as a down to earth reference for professionals faced with the challenges of remediating a contaminated site this book is also useful as a primer for students and those new to the field it includes numerous figures photographs tables and helpful checklists
