volume explores the multiple aspects of cyclical syntactic change from a wide range of empirical perspectives the notion of linguistic cycle has long been recognized as being relevant to the description of many processes of language change in grammaticalization a given linguistic form loses its lexical meaning and sometimes some of its phonological content and then gradually weakens until it ultimately vanishes this change becomes cyclical when the grammaticalized form is replaced by an innovative item which can then develop along exactly the same pathway but cyclical changes have also been observed in language change outside of grammaticalization proper the chapters in this book reflect the growing interest in the phenomenon of grammaticalization and cyclicity in generative syntax with topics including the diachrony of negation the syntax of determiners and pronominal clitics the internal structure of wh words and logical operators cyclical changes in argument structure and the relationship between morphology and syntax the contributions draw on data from multiple language families such as indo european semitic japonic and athabascan the volume combines empirical descriptions of novel comparative data with detailed theoretical analysis and will appeal to historical linguists working in formal and usage based frameworks as well as to typologists and scholars interested in language variation and change more broadly more than 1220 entries elaborately described five different indexes die reihe studies on modern orient wurde als studien zum modernen orient im century church history in stead of a traditional festschrift honouring the different fields of research he has contributed to this will be a focused anthology treating a specific theme related to rasmussen s research profile one of professor rasmussen s most recent publications a little popularized book in norwegian titled what is protestantism reveals a central aspect research interest namely the weberian interest for protestantism s cultural significance despite difficulties he finds the concept useful as a weberian idealtypus enabling research on a phenomenon combining theological historical and sociological dimensions thus he employs the protestantism as an integrative concept to trace the makeup of today s secular societies this profiled approach is a point of departure for this anthology discussing important aspects of historiography in reformation history continuity and breaks surrounding the reformation contemporary significance of reformation history research traces of the reformation in today s society the book relates to current discussions on protestantism and is relevant to everyone who want to keep up to date with the latest research in the field a magazine leave their homeland in search of a better future the ainu of japan and others who come from siberia tibet and mongolia travel the ice corridors to reach the bering land bridge and escape the last ice age this sets the stage for a story of intrigue and amazing magical events as they travel south through north america central america and eventually to tierra del fuego the end of the earth along the way they record their stories on stone so the account of their struggle will last throughout time suspensefully paced and alive with a remarkable cast of characters written on stone is the story of that journey it is a novel of empowerment a moving tribute to the human spirit social media and mental health depression predators and personality disorders presents case studies and guidelines to help policymakers parents educators and criminal justice experts better understand the negative effects of social media on mental health the book examines the direct correlations between technology and the onset of significant personality and mood disorders criminal violence and other dysfunctional behavior particularly in american youth the text addresses cyberbullying suicide and the cycle of abuse internet addiction and its relation to impaired psychosocial functioning and the narcissistic tendencies that individuals can develop as a result of too much screen time including attention seeking behavior constant self promotion and feelings of entitlement chapters are dedicated to the adverse effects of social media on dating and romantic relationships the concept of online friends and the dangerous fantasies that individuals can foster online the book closes with a timely chapter about radicalization terrorism and new media scientifically rigorous in nature social media and mental health is also an ideal textbook for college level courses in forensic psychology social work juvenile crime and communications it can also be used as a guide for educators employers and administrators including law enforcement or corrections officials who work with schools youth groups and at risk populations the importance

of lighting for the safety of road users the convenience of people of all levels of ability and the prevention of street crime can hardly be exaggerated added to this the considerable number of recent developments and the complexity of the issues involved in effective and environmentally acceptable road lighting make this broadly based treatment of the subject both timely and welcome dr ir schreuders aim is to clarify the subject for all those involved in road lighting from planning through design and engineering to implementation and maintenance this book is an introduction to the modern theory of markov chains whose goal is to determine the rate of convergence to the stationary distribution as a function of state space size and geometry this topic has important connections to combinatorics statistical physics and theoretical computer science many of the techniques presented originate in these disciplines the central tools for estimating convergence times including coupling strong stationary times and spectral methods are developed the authors discuss many examples including card shuffling and the ising model from statistical mechanics and present the connection of random walks to electrical networks and apply it to estimate hitting and cover times the first edition has been used in courses in mathematics and computer science departments of numerous universities the second edition features three new chapters on monotone chains the exclusion process and stationary times and also includes smaller additions and corrections throughout updated notes at the end of each chapter inform the reader of recent research developments originally published as catalogue 100 of antiquariaat forum in 10 issues between 1994 2002 with an extra issue with extensive indices the immigrant girl growing up in alberta canada rolls out fast exciting colourful and authentic the astonishing thing is life was really like that left alone in a tiny dark closet with only a cardboard box i tore off a piece of the cardboard and stuck it in my mouth and chewed and chewed and chewed before swallowing he my teacher was chasing me down the street and the whole time he was screaming at the top of his lungs you re really in trouble this time oh god help me i prayed i was so afraid of my teacher and never wanted to go back to school again growing up as an immigrant child is not easy the pressure they face is high unlike adults children are still in the process of creating their identities and being caught between two cultures can create internal conflicts we arrived in a completely new environment with its share of challenges having to rebuild our lives from the bottom up on the one hand theories of modern physics are very successful in their areas of application but on the other hand the irreconcilability of general relativity gr and quantum electrodynamics qed suggests that these theories of modern physics are not the final answer regarding the fundamental workings of the universe this monograph takes the position that the key to advances in the foundations of physics lies in the hypothesis that massive systems made up of antimatter are repulsed by the gravitational field of a body of ordinary matter this hypothesis takes us to an uncharted territory where gr and qed do not hold up from there the elementary process theory ept is developed this is a collection of seven generalized process physical principles that do hold up if the hypothesis is a fact of nature using four dimensionalistic terminology the ept abstractly describes an elementary process in the temporal evolution of a massive system that interacts with its environment the idea is that these elementary processes take place at planck scale and are essentially all the same regardless of the type of interaction that takes place the ept is thus intended as a candidate for a unifying scheme that applies to all four basic interactions by mathematical modeling the relation is explored between the ept and classical mechanics quantum mechanics special relativity and gr in the first full length study of christopher smart s translations and the place and function of translation in smart s poetry rosalind powell proposes a new approach to understanding the relationship between smart s poetics and his practice drawing on translation theory from the early modern period to the present day this book addresses smart s translations of horace phaedrus and the psalms alongside the better known religious works such as jubilate agno and a song to david five recurrent threads run throughout powell s study the effect of translation on the identity of a narrative voice in a rewritten text the techniques that are used to present translated texts to a new literary

cultural and linguistic readership performance and reading contexts the translation of great works as an attempt to achieve literary permanence and finally the authorial influence of smart himself in terms of the overt religiosity and nationalism that he champions in his writing in exploring smart s major translation projects and revisiting his original poems powell offers insights into classical reception and translation theory attitudes towards censorship expressions of nationalism in the period developments in liturgy and hymnody and the composition of children s books and school texts in the early modern era her detailed analysis of smart s translating poetics places them within a new contemporary context and locality to uncover the poet s works as a coherent project of englishing
