and short theory reminders for students who aim to excel at problem solving material is introduced in a structured manner each new concept is followed by a problem set that explores the content in detail each book ends with a problem set that reviews both concepts presented in the current volume and related topics from previous volumes the series forms a learning continuum that explores strategies specific to competitive mathematics in depth and breadth full solutions explain both reasoning and execution often several solutions are contrasted the problem selection emphasizes comprehension critical thinking observation and avoiding repetitive and mechanical procedures ready to participate in a math competition such as moems math kangaroo in usa or noetic math this series covers geometry combinations permutations probability theory trigonometry science engineering and business problems and more volume 1 of 2 sold separately covers number theory algebra functions simultaneous equations complex math and more the goal of sat math master guide to hard problems is to help good students get a top math score on the sat it is an exhaustive guide to the most difficult problems found on the test this two volume set is based on a thorough analysis of sat specifications published tests prep books websites and the author s years of experience tutoring sat students it includes all subject areas and distills the scope of questions into archetypes of the most challenging math problems there are over 300 such archetypes covering every problem solving technique a student will need to score an 800 the framework of this guide is anchored on these archetypes they form a basis set of problems designed to minimize the virtual distance between them and any math problem a student might encounter on the sat subject reviews are included along with over 500 additional practice problems that reinforce fill in and expand the areas covered by the archetypes practice problems do not simply replay the archetypes almost all are unique variants some practice problems are more difficult than their corresponding archetypes a few practice problems identified by the signifier challenge are more intricate than similar problems on the sat however these are great practice for the warrior class and require only the same basket of problem solving techniques needed for the test over 800 problems are fully explored in these two volumes they are very challenging for most students and would typically be missed by those scoring less than 600 on the math section every problem includes a hint and a clear solution presented as a tutor would teach it such a huge collection allows students and instructors to easily focus on shaky subjects unique to this set are the over 600 alternate solutions illustrating shortcuts and clever methods that are less obvious but save valuable time if employed their purpose is to impart creative intuition and insight into the many paths a solution may take with easy questions filtered out volumes 1 and 2 contain enough hard problems for about 50 different sat tests the is a globalinformationspace consistingoflinked mastery in addition the guide contains check your skills quizzes as you progress through the material complete problem sets at the end of every chapter and mixed drill sets at the end of the book to help you build accuracy and speed all practice problems include detailed answer explanations written by top scorers mathematics is integral part of competitive exam the subject is used starting from daily life to advanced scientific field over the generation mathematics has become the language of science played immense role in advancing human culture the subject is integral part of school curriculum still many student find the subject difficult no matter how hard we try we can't run away from at least basic mathematics because it requires in almost all business the math develops logical rational thinking its not only just solving problem but it is the way to deal with unknown situation use the resource knowledge at our hand to master this subject conceptual study is required but most of time student run behind thousands of shortcut shortcuts varies from problem to problem hence by such approach to master in subject one has to remember thousands of unnecessary shortcuts its is stressful often decreases accuracy so instead of learning thousands shortcuts its better to understand subject logically conceptually such one time learning give advantages to student lifetime this book gives generic concept by using which one can solve problem faster than shortcuts since methods are generic so they are limited many methods in this books are the result of deep insight understanding research in subject they are not available elsewhere editing this book was quite hectic process the different colours are added to make explanation easy to understand learn mathematics one time remember life time salient feature o uses clear easy language to understand o explain subject with unified coherent approach o simplifies quicker methods of vedic mathematics o goes from basic to advance level o gives quicker method for all topics that include multiplication division power roots equation lcm hcf etc o effective use of different colors to simplify lesson to emphasize essential concept o present novel methods invented by authors for topics like divisibility checking higher power roots squaring etc o useful for competitive exams to solve problems instantaneously the american mathematics competition amc series is a group of contests that judge students mathematical abilities in the form of a timed test the amc 8 is the introductory level competition in this series and is taken by tens of thousands of students every year in grades 8 and below students are given 40 minutes to complete the 25 question test every right answer receives 1 point and there is no penalty for wrong or missing answers so the maximum possible score is 25 25 while all amc 8 problems can be solved without any knowledge of trigonometry calculus or more advanced high school mathematics they can be tantalizingly difficult to attempt without much prior experience and can take many years to master because problems often have complex wording and test the knowledge of mathematical concepts that are not covered in the school curriculum this book is meant to teach the skills necessary to solve mostly any problem on the amc 8 however our goal is to not only teach you how to perfect the amc 8 but we also want you to learn and understand the topics presented as if you were in a classroom setting above all the first and foremost goal is for you to have a good time learning math the units that will be covered in this book are the following test taking strategies for the amc 8 number sense in the amc 8 number theory in the amc 8 algebra in the amc 8 counting and probability in the amc 8 geometry in the amc 8 advanced competition tricks for the amc 8 a fully comprehensive text for courses in electrical principles circuit theory and electrical technology providing 800 worked examples and over 1 350 further problems for students to work through at their own

pace this book is ideal for students studying engineering for the first time as part of btec national and other pre degree vocational courses as well as higher nationals foundation degrees and first year undergraduate modules this new key text explores the principles and practice of informal education and focuses in particular on the notion of working with which is central to practice in this sector
