accountability in clinical training implies a strong relationship between the training outcomes touted by a training program and the performance of its graduates the training program and its faculty must be able to ensure that students have the competencies necessary for entering the profession and can offer competent services in addition responsibility for the quality and value of training must be assumed by the profession pressure for accountability is becoming increasingly

apparent as the public learns about fraud waste and abuse in publicly funded programs fishman neigher 1982 federally supported clinical training programs have had to defend their training practices against threats of funding loss without the hard data needed to support their practices funding seems to have been forthcoming mostly because of our ability to demonstrate the need for clinical counseling and school psychologists graduates seeking professional careers in such applied fields demand considerable trust from their clientele and the public at large when they establish themselves offer and advertise their services make claims on public monies and profess to do good and no harm neither their clientele nor the public are in the position to evaluate the services of the profession or the claims made for these american psychological association lapa 1982 p

originally published in 1972 there were many classics dealing with assessment and testing on the market at the time but most of these left the inexperienced reader bewildered in the early stages because of their size and insufficient explanation of the many technical terms used there were a distinct lack of books which gave students in colleges of education dealing with psychology for the first time a simple explanation of basic terms in assessment and testing and which introduced them briefly to the different types of tests available assessment and testing aimed to fill this large gap it looks at such key psychological terms as sample objectivity subjectivity and such basic statistical terms such as mean standard deviation and normal curve of distribution because it assumes that the reader has no knowledge of such terms it gives careful and simply illustrated explanations of each in the same way in simple language with any technical terms explained and illustrated it explains intelligence and personality tests questionnaires sociometric measures projection techniques and other areas of assessment and testing which every practising teacher will meet the book aims to be essentially practical it is appreciated all the time that the readers are those who will teach children it is designed to provide a

solid foundation upon which the reader can build later to augment his own experience of identifying children's particular needs
