The Countess of Pembroke's Arcadia 1640 this beautiful glimpse into the mind of a modern zen priest shows us how we can cultivate and experience peace through silence stillness and practice a balm for our troubled hearts and minds soulful warm and welcoming and at times heartbreaking lion s roar while there is suffering in the world and in each of us there is also the possibility and the experience of peace as zenju earthlyn manuel a zen priest and disciple of thich nhat hanh who has written at length on race gender sexual orientation and homelessness writes in the introduction i have testified many times of my suffering before i die i must speak of peace the deepest peace is a poetic lyrical ode to the ways contemplative practice illuminates daily life it is at once a window into zenju s personal practice and an invitation to begin our own

The Burning Light 2017-12-15 first published in 2005 this expansive and fascinating treatment of ancient egyptian mythology and its influence on the traditions that followed from it includes explorations of sign language in mythological representation totemism fetishism spirits and gods the egyptian book of the dead and egyptian wisdom in the hebrew genesis readers will enjoy the wealth of information offered by massey as well as his clear and readable style

Light 1859 this book is the only account of what honeybees actually see bees detect some visual features such as edges and colours but there is no sign that they reconstruct patterns or put together features to form objects bees detect motion but have no perception of what it is that moves and certainly they do not recognize things by their shapes yet they clearly see well enough to fly and find food with a minute brain bee vision is therefore relevant to the construction of simple artificial visual systems for example for mobile robots the surprising conclusion is that bee vision is adapted to the recognition of places not things in this volume adrian horridge also sets out the curious ~~and contestions~~

history of how bee vision came to be understood with an account of a century of neglect of old experimental results errors of interpretation sharp disagreements and failures of the scientific method the design of the experiments and the methods of making inferences from observations are also critically examined with the conclusion that scientists are often hesitant imperfect and misleading ignore the work of others and fail to consider alternative explanations the erratic path to understanding makes interesting reading for anyone with an interest in the workings of science but particularly those researching insect vision and invertebrate sensory systems

Recent Researches in Education 2016-04-19 the present edition may be regarded as a descendant much changed and greatly enlarged of the late dr a d imms outlines of entomology first published in 1942 this went through three further editions without much change but after the death of the original author a fifth revised edition by professor o w richards and myself appeared in 1959 and a sixth in 1978 the book now appears in a considerably extended version in which i have tried to provide a more balanced introduction to the whole field of ~~modern~~ human resource

entomology by dealing with several aspects of the subject not discussed at all in previous editions thus in addition to innumerable lesser changes in the sections on insect structure function development classification and phylogeny i have completely recast the earlier chapter on some important modes of life in insects this now includes a far wider range of biological topics well exemplified by the insects and should i hope appeal not only to those already dedicated to entomology but also to others with more general biological interests a completely new chapter on the biology of insect populations has also been added and may serve to indicate the debt which modern ecological theory owes to work on insect populations it should hardly be necessary to apologize for introducing a certain amount of elementary mathematics into this account of a subject which is now among the most highly quantitative of biological disciplines
