circuits a c machines utilization of electrical energy basic electronics control system mechanic mining machinery is a simple e book for iti engineering course mechanic mining machinery first second year sem 1 2 3 4 revised syllabus in 2018 it contains objective questions with underlined bold correct answers mcq covering all topics including all about safety aspect related to the trade basic fitting operations viz making filing sawing chiseling drilling tapping grinding sliding t fit and square fit lathe operation different turning operation including thread cutting and relevant job on shaper and milling machine preventive maintenance of pumps and compressors different types of engines and their parts measurement of voltage current power factor and other components of electrical circuits transformer and test of transformers and rectifier circuits types of pumps and motors rotor winding of induction motors circuit breakers and relays hydraulic and pneumatic parts and circuit tyre and inspection of puncture different machines used in mining like crawler hydraulic shovel walking dragline wagon drill blast hole drill jack hammer tractor dozer wheel loader dumper maintenance of motor grader and surface miner machines working in mines maintenance of conveyor belt air compressor hydraulic hoist and lubrication system gear box brake system and lighting system and wiper system of vehicles and lots more this comprehensive up to date introduction to electrical machines is designed to meet the needs of undergraduate electrical engineering students it presents the essential principles of rotating machines and transformers the emphasis is on the performance though the book also introduces the salient features of electrical machine design the book provides accessible student friendly coverage of dc machines transformers three phase induction motor single phase induction motor fractional horsepower motors and synchronous machines the clear writing style of the book enhanced by illustrative figures and simplified explanations of the fundamentals makes it an ideal text for gaining a thorough understanding of the subject of electrical machines key features include detailed coverage of the construction of electrical machines lucid explanations of the principles of operation of electrical machines methods of testing of electrical machines performance calculations of electrical machines wealth of diverse solved examples in each chapter to illustrate the application of theory to practical problems salient features of design of electrical machines objective type questions to help students prepare for competitive exams in its 20th year objective electrical technology continues to be a comprehensive text aided by a collection of multiple choice questions specifically for aspirants of various competitive such as gate upsc ias ies and ssc je as well as students who are preparing for university examinations divided in 4 parts and 44 chapters every important concept of electrical technology is fairly treated on the other hand the questions provided in this book have been selected from various potent resources to provide the students with an idea of how the questions are set and what type of questions to expect on the final day available on amazon kindle store at amazon in dp b0ckxwws31 1500 objective questions for dgms questions to expect on the final day sgn the objective automobile engineering automobile engineering subject mcqs pdf ebook covers papers practice sets with answers the general science section covering physics chemistry biology and computer science has taken an important dimension in most of the competitive examinations like ssc cds nda assistant commandant cpo upsc and state level psc exams and those lacking the basic general science knowledge lag behind others in the long run the present book will act as an objective question bank for general science the book has been prepared keeping in mind the importance of the subject this book has been divided into four sections namely physics chemistry biology and computer science each divided into number of chapters as per the syllabi of general science section asked in various competitive exams the physics section covers motion force laws of motion gravitation work energy power simple harmonic motion wave motion light ray optics current electricity its effects nuclear physics semiconductor communication etc whereas the chemistry section has been divided into atomic structure chemical reactions chemical bonding solutions colloids energetics kinetics electrochemistry metallurgy metals their compounds flame fuel food chemistry etc the biology section in the book covers biology its branches cell structure functions cell cycle cell division plant tissues animal nutrition plant system reproduction in organisms respiratory system excretory system reproductive system genetics biotechnology animal husbandry etc whereas the computer awareness section has been divided into computer organisation memory data representation software data communication networking and internet computer security the chapters in the book contain more than 100 tables which will help in better summarization of the important information each chapter in the book contains ample number of objective questions ample number of objective questions including questions asked in previous years exams which have been designed on the lines of questions asked in various competitive examinations with a collection of more than 5000 highly useful questions the content covered in the book tries to simplify the complexities of some of the topics so that non science students feel no difficulty while studying general science also hints and solutions to the difficult questions have been provided in the book as the book thoroughly covers the general science section asked in a number of competitive examinations it for sure will work as a preparation booster for various competitive examinations like upsc state level pscs examinations ssc cds nda cisf and other general competitive recruitment examinations recently increasing interest has been shown in applying the concept of pareto optimality to machine learning particularly inspired by the successful developments in evolutionary multi objective optimization it has been shown that the multi objective approach to machine learning is particularly successful to improve the performance of the traditional single objective machine learning methods to generate highly diverse multiple pareto optimal models for constructing ensembles models and and to achieve a desired trade off between accuracy and interpretability of neural networks or fuzzy systems this monograph presents a selected collection of research work on multi objective approach to machine learning including multi objective feature selection multi objective model selection in training multi layer perceptrons radial basis function networks support vector machines decision trees and intelligent systems mechanic machine tool maintenance a is

this e book is also useful for professors to refresh material an investigation into the assignment of moral responsibilities and rights to intelligent and autonomous machines of our own making one of the enduring concerns of moral philosophy is deciding who or what is deserving of ethical consideration much recent attention has been devoted to the animal question consideration of the moral status of nonhuman animals in this book david gunkel takes up the machine question whether and to what extent intelligent and autonomous machines of our own making can be considered to have legitimate moral responsibilities and any legitimate claim to moral consideration the machine question poses a fundamental challenge to moral thinking questioning the traditional philosophical conceptualization of technology as a tool or instrument to be used by human agents gunkel begins by addressing the question of machine moral agency whether a machine might be considered a legitimate moral agent that could be held responsible for decisions and actions he then approaches the machine question from the other side considering whether a machine might be a moral patient due legitimate moral consideration finally gunkel considers some recent innovations in moral philosophy and critical theory that complicate the machine question deconstructing the binary agent patient opposition itself technological advances may prompt us to wonder if the science fiction of computers and robots whose actions affect their human companions think of hal in 2001 a space odyssey could become science fact gunkel s argument promises to influence future considerations of ethics ourselves and the other entities who inhabit this world useful for all commerce competitive examination where objective questions are the general science section covering physics chemistry biology and computer science has taken an important dimension in most of the competitive examinations like ssc cds nda assistant commandant cpo upsc and state level psc exams and those lacking the basic general science knowledge lag behind others in the long run the present book will act as an objective question bank for general science the book has been prepared keeping in mind the importance of the subject this book has been divided into four sections namely physics chemistry biology and computer science each divided into number of chapters as per the syllabi of general science section asked in various competitive exams the physics section covers motion force laws of motion gravitation work energy power simple harmonic motion wave motion light ray optics current electricity its effects nuclear physics semiconductor communication etc whereas the chemistry section has been divided into atomic structure chemical reactions chemical bonding solutions colloids energetics kinetics electrochemistry metallurgy metals their compounds flame fuel food chemistry etc the biology section in the book covers biology its branches cell structure functions cell cycle cell division plant tissues animal nutrition plant system reproduction in organisms respiratory system excretory system reproductive system genetics biotechnology animal husbandry etc whereas the computer awareness section has been divided into computer organisation memory data representation software data communication networking and internet computer security the chapters in the book contain more than 100 tables which will help in better summarization of the important information each chapter in the book contains ample number of objective questions ample number of objective questions including questions asked in previous years exams which have been designed on the lines of questions asked in various competitive examinations with a collection of more than 5000 highly useful questions the content covered in the book tries to simplify the complexities of some of the topics so that non science students feel no difficulty while studying general science also hints and solutions to the difficult questions have been provided in the book as the book thoroughly covers the general science section asked in a number of competitive examinations it for sure will work as a preparation booster for various competitive examinations like upsc state level pscs examinations ssc cds nda cisc and other general competitive recruitment examinations

recently increasing interest has been shown in applying the concept of pareto optimality to machine learning particularly inspired by the successful developments in evolutionary multi objective optimization it has been shown that the multi objective approach to machine learning is particularly successful to improve the performance of the traditional single objective machine learning methods to generate highly diverse multiple pareto optimal models for constructing ensembles models and and to achieve a desired trade off between accuracy and interpretability of neural networks or fuzzy systems this monograph presents a selected collection of research work on multi objective approach to machine learning including multi objective feature selection multi objective model selection in training multi layer perceptrons radial basis function networks support vector machines decision trees and intelligent systems

an investigation into the assignment of moral responsibilities and rights to intelligent and autonomous machines of our own making one of the enduring concerns of moral philosophy is deciding who or what is deserving of ethical consideration much recent attention has been devoted to the animal question consideration of the moral status of nonhuman animals in this book david gunkel takes up the machine question whether and to what extent intelligent and autonomous machines of our own making can be considered to have legitimate moral responsibilities and any legitimate claim to moral consideration the machine question poses a fundamental challenge to moral thinking questioning the traditional philosophical conceptualization of technology as a tool or instrument to be used by human agents gunkel begins by addressing the question of machine moral agency whether a machine might be considered a legitimate moral agent that could be held responsible for decisions and actions he then approaches the machine question from the other side considering whether a machine might be a moral patient due legitimate moral consideration finally gunkel considers some recent innovations in moral philosophy and critical theory that complicate the machine question deconstructing the binary agent patient opposition itself technological advances may prompt us to wonder if the science fiction of computers and robots whose actions affect their human companions think of hal in 2001 a space odyssey could become science fact gunkel s argument promises to influence future considerations of ethics ourselves and the other entities who inhabit this world
