the encyclopedia of international sports studies covers the full range of sub disciplines within sports studies including scientific social scientific and medical approaches the encyclopedia is alphabetically organized and consists of principal articles covering key disciplinary areas such as sports economics and sports history large topical entries on central subjects such as resistance training and the diagnosis of sports injuries smaller topical entries on subjects such as cross training and projectile motion short overviews of other important terms and concepts from metabolism and motivation to muscle tension length relationship this encyclopedia provides a comprehensive coverage of all aspects of the science social science and medicine of sport the nature of dark matter remains one of the preeminent mysteries in physics and cosmology it appears to require the existence of new particles whose interactions with ordinary matter are extraordinarily feeble one well motivated candidate is the axion an extraordinarily light neutral particle that may possibly be detected by looking for their conversion to detectable microwaves in the presence of a strong magnetic field this has led to a number of experimental searches that are beginning to probe plausible axion model space and may reveal the axion in the near future these proceedings discuss the challenges of designing and operating tunable resonant cavities and detectors at ultralow temperatures the topics discussed here have potential application far beyond the field of dark matter detection and may be applied to resonant cavities for accelerators as well as designing superconducting detectors for quantum information and computing applications this work is intended for graduate students and researchers interested in learning the unique requirements for designing and operating microwave cavities and detectors for direct axion searches and to introduce several proposed experimental concepts that are still in the prototype stage focusing on issues of vital importance to those seeking to understand and reform the tort system this volume takes a multi disciplinary approach including theoretical economic analysis empirical analysis socio economic analysis and behavioral anal interdisciplinary research now receives a great deal of attention because of the rich creative contributions it often generates but a host of factors institutional interpersonal and intellectual also make a daunting challenge of conducting research outside one s usual domain this newly updated and revised edition of interdisciplinary research is a substantive and practical guide to the most effective avenues for collaborative and integrative research in the social behavioral and bio medical sciences it provides answers to questions such as what is the best way to conduct interdisciplinary research on topics related to human health behavior and development which are the most successful interdisciplinary research programs in these areas how do you identify appropriate collaborators how do you find dedicated funding streams how do you overcome peer review and publishing challenges
