limits imposed by their social and educational environment by means of laws rules values norms or expectations the study is part of a research programme on the course and treatment of juvenile delinquency which started at the rijksuniversiteit groningen during the eighties young people s attitudes towards social limits are assessed by the standard reaction instrument a critical incident technique is used to elicit young people s knowledge behavioral intentions and motivations in ten hypothetical situations including social limits the instrument was administered from youngsters in secondary schools and from same aged detained youngsters who have committed at least one criminal offence which has been recorded by police or judicial authorities the responses of both groups are compared in order to test the validity of the instrument further the relationship is tested between the youngsters attitudes towards social limits and self reported delinquent and aggressive behavior finally a comparison is made between the responses of flemish and dutch youngsters starting point of the empirical study is a social psychological view on juvenile delinquency in this view which is based on the self presentation paradigm developed by the sociologist ervin goffman and the early symbolic interactionists juvenile delinquency is considered as a means of social communication towards significant others parents teachers peers society special attention is paid to the development maintenance and management of social reputation by the juvenile delinquent graham priest presents an the contemporary discussion on human rights fassbender and traisbach along with a group of leading experts in the field examine the issue from multiple disciplinary perspectives analysing the limits of our current discourse of human rights it does so in an original way and without attempting to deconstruct or deny human rights each contribution is supplemented by an engaging comment which
