[ion wikipedia](#) May 11 2024 an ion 'aɪ ɒn ən 1 is an atom or molecule with a net electrical charge the charge of an electron is considered to be negative by convention and this charge is equal and opposite to the charge of a proton which is considered to be positive by convention

**what is an ion definition and examples thoughtco** Apr 10 2024 an ion is defined as an atom or molecule that has gained or lost one or more of its valence electrons giving it a net positive or negative electrical charge in other words there is an imbalance in the number of protons positively charged particles and electrons negatively charged particles in a chemical species

**ion definition chemistry examples facts britannica** Mar 09 2024 ion any atom or group of atoms that bears one or more positive or negative electrical charges positively charged ions are called cations negatively charged ions anions ions migrate under the influence of an electrical field and are the conductors of electric current in electrolytic cells

**what is an ion chemistry definition science notes and projects** Feb 08 2024 in chemistry the definition of an ion is an electrically charged atom or molecule this means the atom or molecule has an unequal number of protons and electrons neutrons carry no net electrical charge so they don't affect ions directly

**introduction to ions video khan academy** Jan 07 2024 an atom with an electric charge is called an ion a positively charged ion a cation has more protons than electrons a negatively charged ion an anion has more electrons than protons

**naming ions and ionic compounds article khan academy** Dec 06 2023 learn how to name positive ions cations negative ions anions and ionic compounds involving main group elements sodium chloride is an ionic compound made up of sodium ions and chloride ions in a crystal lattice

**what is an ion chemtalk** Nov 05 2023 an ion is an atom or molecule with either a positive or negative electrical charge an ion has a charge because the number of protons does not equal the number of electrons to find the number of protons and electrons check out this article

*3 5 ions and ionic compounds chemistry libretexts* Oct 04 2023 ions form when atoms lose or gain electrons ionic compounds have positive ions and negative ions ionic formulas balance the total positive and negative charges ionic compounds have a simple system

**6 1 ions chemistry libretexts** Sep 03 2023 an atom that picks up a charge by gaining or losing electrons is called an ion in this section we will focus on monatomic ions ions formed from a single atom later in this chapter we will look at a second type of ion called a polyatomic ion these form when a group of bonded atoms collectively gain a charge

**4 7 ions losing and gaining electrons chemistry libretexts** Aug 02 2023 anions some atoms have nearly eight electrons in their valence shell and can gain additional valence electrons until they have an octet when these atoms gain electrons they acquire a negative charge because they now possess more electrons than protons negatively charged ions are called anions

**ion definition what is an ion detailed explanation with faqs** Jul 01 2023 what is an ion an ion can be defined as a chemical species which holds a positive or negative charge of some magnitude the term ion can be used to refer to atoms or molecules that have non zero net charges associated with them

**anion simple english wikipedia the free encyclopedia** May 31 2023 an ion is an atom or group of atoms with an electrical charge anions are one of the two types of ions the other type is called a cation having a positive charge in many crystals the anions are bigger the little cations fit into the spaces between them

*what's an ion youtube* Apr 29 2023 ions are formed because of a net charge on an atom because the number of protons and electrons do not balance this means that the atom is no longer electrically neutral but is a cation or an

[naming ions and ionic compounds video khan academy](#) Mar 29 2023 ionic compounds are neutral compounds made up of positively charged ions called cations and negatively charged ions called anions for binary ionic compounds ionic compounds that contain only two types of elements the compounds are named by writing the name of the cation first followed by the name of the anion

[ion definition and examples biology online dictionary](#) Feb 25 2023 biology chemistry medicine definition an ion is a charge carrying atom

or molecule with an unequal number of electrons and protons it is formed by the process of ionization and plays several important roles in the biological world anions are negatively charged ions whereas cations are positively charged ions

ion definition meaning merriam webster Jan 27 2023 noun 'ī ən 'ī ,än 1 an atom or group of atoms that carries a positive or negative electric charge as a result of having lost or gained one or more electrons 2 a charged subatomic particle such as a free electron ion 2 of 3 abbreviation ionic ion 3 of 3 noun suffix 1 a act or process validation b
