Bookseller and the Stationery Trades' Journal 1970 britain has a rich heritage of school buildings dating from the later middle ages to the present day while some of these schools have attracted the attention of architectural historians they have not previously been considered from the educational viewpoint even schools of little or no architectural interest are important sociologically since the changing architecture of schools reflects changing ideas about how children should be educated and organized for teaching purposes documentary material relating to education is often fragmentary and buildings may thus constitute the only real source of knowledge about the development of particular schools and can also throw light on general educational history originally published in 1971 and 1977 these books are therefore not only a major contribution to architectural history but also a study in the development of educational ideas and practices from the fourteenth to the twentieth century

The Software Encyclopedia 1986 nuclear magnetic resonance nmr is an analytical tool used by chemists and physicists to study the structure and dynamics of molecules in recent years no other technique has gained such significance as nmr spectroscopy it is used in all branches of science in which precise structural determination is required and in which the nature of interactions and reactions in solution is being studied annual reports on nmr spectroscopy has established itself as a premier means for the specialist and non specialist alike to become familiar with new techniques and applications of nmr spectroscopy this volume of annual reports on nmr spectroscopy focuses on the analytical tool used by chemists and physicists and inlcudes topics such as profiling of food samples recent advances in solution nmr studies and magic angle spinning nmr studies of protein assemblies
