excerpt from human anatomy physiology and hygiene a text book for schools academies colleges in preparing this book we have aimed to give facts in clear concise language and as free as possible from technical terms all speculations and hypotheses have been omitted as inconsistent with a work of this kind our endeavor has been to present the subject both to the student and to the general reader in such a form that the facts may be easily grasped and readily retained the anatomy and physiology are given first because a knowledge of the location and the functions of the organs of the body is needed before we can understand how to preserve them in a state of health we must be acquainted with a law before we can keep it and we must know the laws which govern our systems before we can observe them the body is composed of many organs

each of which performs its part in the economy of the system yet the functions of these organs are closely connected with each other and they all act so as to produce a unity and harmony in the whole being about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

excerpt from human physiology an elementary text book of anatomy physiology and hygiene from a considerable experience with both very elementary and more advanced classes the author has been led to certain conclusions in regard to the teaching of elementary physiology and hygiene it is not proposed to enter here into a discussion of the correctness of these conclusions but a brief statement of a few principles that seem fundamental may perhaps be allowable the chief object of teaching physiology in the public schools is to train the pupils to keep their bodies in health the mere teaching of anatomy and physiology will not accomplish this for the pupil cannot master the structure and workings of the body in a way that will enable him to frame the laws of health and apply them neither can the desired end be reached by teaching rules of health without an anatomical and physiological basis for without such a basis hygiene is an intangible and an elusive subject the author has therefore concluded that a conservative middle course is wiser than either of the extremes of method mentioned above an elementary text in physiology should be a balanced text containing sufficient anatomy to make clear the broader outlines of the structure of the human body enough physiology to make plain the great laws according to which the body lives and a full discussion of how a violation of these laws may be avoided for the introduction of certain new matter as for example the cell idea the work of enzymes and matter relating to germ diseases there is little need for explanation the

groundwork of physiology and pathology has in recent years so shifted and extended itself that the subject matter of an elementary course must to a considerable extent be altered if it is to furnish 3 about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

clinical correlates in anatomy and physiology is designed to address one of the challenges for allied health students to correlate the information introduced in basic science classes to the clinical problems they see in the field a good clinician in allied health is knowledgeable in anatomy physiology pathology and other science fields they are able to quickly apply this knowledge to the clinical setting for good patient care however both students and instructors know that applying knowledge gleaned from basic science classes to their own clinical practice is not always easy using short vignettes and featuring new and updated information the new edition of clinical correlates in anatomy and physiology illustrates clinical problems that align with the topics covered in a first year anatomy and physiology course students and instructors can use these vignettes to better understand the systems as they cover them in class these illustrative examples pique student interest and serve as the

basis for classroom discussion as well as introduce the concepts of pathophysiology in the context of systems physiology while designed for the allied health student anyone with an interest in processes of health and disease will enjoy these short discussions illustrating clinical pathologies of systems physiology mary katherine lockwood received a b s in biology from davidson college in north carolina an m s in physiology from the pennsylvania state university and a ph d in public health with a concentration in nutrition and biological chemistry from the university of california los angeles dr lockwood is a clinical associate professor in the department of molecular cellular and biomedical sciences at the university of new hampshire where she teaches anatomy and physiology and clinical nutrition in addition she is licensed in new hampshire as an instructor coordinator for emergency medical services teaches emergency medicine and cpr and responds with a 911 ambulance service as an advanced emt
