there has long been a need for a systematic introduction to the modern pure theory of international trade that would take the student through a careful introduction to the tools of analysis and the main logical propositions into the application of the theory to practical problems of international economic policy trade theory should be part and parcel of price theory distinguished only by the fact that other countries form part of the natural opportunities and natural constraints that a country confronts in its efforts to bend nature to its desire to produce utility yielding goods and services but its exposition is often confused by the attachment of its expositors to obsolete problems and backward analytical techniques this book covers in detail classical neoclassical and modern theories of international trade with special attention to problems of equilibrium growth and welfare and discusses the

work of all major contributors in this field from ricardo and mill through meade heckscher and ohlin to the growth models of johnson solow and uzawa all problems are clearly stated and the easiest and most convenient solutions are sought in each case with the more technical topics in the field discussed in several chapters and appendixes that may be omitted for less advanced students without interrupting the continuity of the book the book's coverage is complete and entirely up to date it is written primarily for advanced undergraduate and graduate courses in international trade but it will also serve as an important reference tool for professional economists working in this field and will be of considerable interest to students and practitioners dealing with problems of economic development and international business relationships more generally miltiades chacholiades studied at the athens school of economics and business science in athens greece and received his doctorate from the massachusetts institute of technology he has taught at new york university and the university of california in los angeles and is presently professor of economics at georgia state university his articles have been published in a number of international professional economic journals

in response to a congressional request gao 1 examined the causes of the increased u s trade deficit and 2 discussed ways to reduce the deficit gao found that 1 the most important cause of the increased u s trade deficit was the sharp rise in the value of the dollar which caused the prices of u s goods to rise compared to the prices of foreign goods 2 the strong u s economic recovery caused u s consumption of goods including imports to rise while the latin american debt problem curtailed u s exports 3 although foreign trade barriers reduced international trade they did not account for the huge increase in the u s trade deficit after 1980 and 4 u s products became less competitive due to the rise of the value of the dollar rather than decreases in productivity gao believes that 1 a lower u s budget deficit would help reduce u s interest rates lower the value of the dollar and lower the trade deficit 2 the u s trade deficit would also fall if the industrial countries eased their economic policies and other countries allowed their currency values to rise 3 u s efforts to open foreign markets and remove foreign trade barriers should continue and 4 u s industries should continue productivity and product quality improvements to increase competitiveness

published in 1997 in this book an attempt has been made to analyze the legal structure of gatt and the wto as well as those agreements which control trade in textiles one of the gatt s major failures was its inability to come into line with the new economic reality and the needs of those states who created this system for controlling international trade trade in textiles was an excellent example of this now the wto aims to overcome this problem thanks to its greater pragmatism and its search for solutions to free trade difficulties the wto is not however the perfect solution its highly political character allows room for improvement even though the key to its success still lies with the effective cooperation of member states as for the textile sector this new panorama for trade in goods provides it with a new opportunity to finally return to the general legal framework in the year 2005

this issue of commonwealth trade hot topics argues that sves have three interrelated reasons for an ambitious outcome at the rio 20 conference and the most important but often overlooked reasons relate to trade first sves are affected disproportionately by global environmental changes e g climate change while they have contributed least to the problem hence global action to avert environmental damages is important second sves due to their size and flexibility should be well placed to implement green policies that reduce inefficiencies in their own policies and enhance growth and foster structural transformation and innovation thus a green economy roadmap will also be important for sves themselves and third sves are affected indirectly because global environmental trends such as increasing natural resource scarcity will affect the volume and terms of international trade and investment flows which are very important for growth in sves
