acquisition daq system is used for all experiments two final projects each spanning 2 3 weeks are included
i flexural loading with stress intensity factor determination and ii dynamic stress wave propagation in a
slender rod and determination of the stress strain curves at high strain rates the book provides
theoretical concepts that are pertinent to each laboratory experiment and prelab assignment that a student
should complete to prepare for the laboratory instructions for securing off the shelf components to design
each experiment and their assembly with figures are provided calibration procedure is emphasized whenever
students assemble components or design experiments detailed instructions for conducting experiments and
table format for data gathering are provided each lab assignment has a set of questions to be answered upon
completion of experiment and data analysis lecture notes provide detailed instructions on how to use
labview software for data gathering during the experiment and conduct data analysis
