A COMPACT & COMPREHENSIVE BOOK OF IIT FOUNDATION MATHEMATICS CLASS IX

america s education system is in a state of crisis a growing number of america s youth cannot read write or do math at all close to grade level in many cases these students and their families do not realize this or care the situation is compounded by the fact that american society no longer values education and does not understand how learning actually works frequent reference is made to the illusion of learning in underperforming schools the book explains the difference between true learning and just being exposed to material it explains the essential role that parents play and that even with encouragement a child cannot be forced to learn the book is targeted at parents teachers administrators government officials and concerned citizens older students may also benefit from reading it despite its frankness about topics which are often disregarded and avoided there is nothing in the book that students don t intuitively understand in particular many students regularly experience the anonymity of being herded like cattle the goal of the book is to raise awareness and discuss whether we can fix the problem we cannot address our nation s education crisis until people understand its underlying causes and scope the book tells the truth in contrast to the misinformation provided by the government and the news media suggested changes for improvement are made including those that can be implemented quickly and easily and those

that require a great deal of money and coordination along with a fundamental change in how america handles education this book is controversial and covers issues that may anger upset or confuse some readers the book includes curse words to paint a vivid picture of the way many students speak and bluntly labels key aspects of our education system as bullshit where applicable

New Syllabus Additional Mathematics Textbook

mathematics is a tricky subject those who love enjoy it much and those who don't feel it's boring i lost interest in mathematics while in 7th class based on whatever i remember it was mainly due to a lack of understanding of negative numbers by nature i am a kinaesthetic person and therefore i refuse to accept anything unless understood thoroughly generally just memorization doesn't work for me and the same thing happened about the multiplication of negative numbers our teacher presented them as rules and i refused to accept them at face value one year later my cousin's grandfather started living with us and he had a great interest in teaching moreover his concepts in mathematics were extremely clear and he could answer all my crazy questions this retriggered my interest in mathematics the whole journey was so joyful that i wish everyone get a grandfather like him who is at home to help with fundamental questions in studies when i started thinking about developing books as per the curriculum the next question was which board to follow after a bit of research i got to know that cbse is a most popular board in india and therefore i decided to develop vedic math books for the cbse curriculum finally i had a choice of developing books from class i and i decided to develop the first book for class viii class viii is the foundation for board exams and therefore i felt this is the right time to start strengthening our knowledge skills and abilities the book is designed in such a way that all required methods from vedic math are covered here and the student need not refer to any other book to learn the basics secondly numbers data are represented in pictorial format or charts wherever appropriate this certainly simplifies the learning i have explained principles wherever relevant this shall help the pupil to understand them further and apply them confidently
