**OCR Psychology** 2013-09-05 in the social consequences of modern psychology eysenck takes the position that social science has real substance and its findings ought to be applicable to social problems of our times although there is little that scientists can do about war and its prevention or about social unrest and upheaval or about strikes and other confrontations there are a number of questions to which we can give tentative answers this book deals with some of these questions and finds some of the answers eysenck begins with a look at a paradox of modern psychology experimental psychologists use strictly scientific methods to investigate what to many people seem trivial and sterile problems yet some social psychologists psychiatrists and psychoanalysts investigate what are clearly important and socially relevant problems but use methods and theories whose scientific rigor is doubtful at best this paradox is artificial and unnecessary methods of investigation and theories and concepts enable us to combine worthwhile problems and rigorous methods the book takes a long look at a particular problem which eysenck

investigated in depth during his illustrious lifetime this tour de force by one of the magisterial figures of modern psychology is written for people as well as about people it is not a rehash of the voluminous writings of lawyers poets politicians dramatists historians psychiatrists and others who have felt compelled to write about these psychological matters without even a smattering of psychological knowledge it is instead based on empirical investigations that are too often declared to be nonexistent by publicists and politicians

Understanding Psychology 1999 how do we know right from wrong good from bad help from hindrance and how can we judge the behaviour of others ethics are the rules and guidelines that we use to make such judgements often there are no clear answers which make this subject both interesting and potentially frustrating in this book the authors offer readers the opportunity to develop and express their own opinions in relation to ethics in psychology there are many psychological studies that appear to have been harmful or cruel to the people or animals that took part in them for example memory researchers carried out studies on a man who had no memory for over forty years but because he had no memory he was never able to agree to the studies is this a reasonable thing to do to someone comparative psychologist harry harlow found that he could create severe and lasting distress in monkeys by keeping them in social isolation is this a reasonable thing to do even if we find out useful things about human distress if you were able to use psychological techniques to break someone down so that they revealed information that was useful to your government would you do it if so why if not why not these ethical issues are not easy to resolve and the debates continue as we encounter new dilemmas this book uses examples from psychological research to look at key ethical issues ethical guidelines of psychologists socially sensitive research ethics in applied psychology the use of animals in research this book is essential reading for undergraduate and pre undergraduate students of psychology and related subjects such as philosophy and social policy
