clinical correlation is a term used in medicine frequently within radiology reports that can and should be taken literally correlate the abnormal or unexpected imaging finding with what's going on with the patient clinically clinical correlation is a medical process physicians use to help them make a diagnosis on a patient to treat his or her condition it is used after a diagnostic test such as an x ray biopsy or mri shows something on an image or tissue scan that is suspicious abnormal or notable clinical correlations in medical education are tools that assist students in connecting basic science concepts with medical applications there are many forms of clinical correlations as well as various methods for their presentation and use the core principle of clinical correlation should be that detailed information about the patient's findings the phenotype is combined with detailed information in the annotated variant table the genotype the intention of this article is to serve as a basic primer regarding critical statistical concepts that appear in medical literature with a focus on the concept of correlation and how it is best utilized in clinical interpretation for understanding the relationships between health factors brand new atlas of histology with functional and clinical correlations provides a practical and useful source of fundamental histology using an innovative and integrated approach that shows how tissues can be modified by a pathological process a comprehensive histology atlas with extras the importance of clinical information and clinical correlation is recognized by pathologists and regulatory agencies such information is vital in leading to a diagnosis that is accurate and appropriately specific textbook of biochemistry with clinical
