CSS: The Missing Manual 2006-08-24 in many developing countries there are large differences in economic conditions and the standard of living between regions and even between communities within the same region in many countries poverty has a clear geographic dimension since the poor are often concentrated in pockets of poverty therefore the design of poverty alleviation policies must also have a significant spatial component although development projects are carefully designed and meticulously evaluated for cost effectiveness and benefits too many of them are not sufficiently targeted geographically the growing availability and use of spatial data organized in a computer system such as a geographical information system gis makes it more feasible to analyze the impact of projects in specific locales and to achieve more effective targeting geographical targeting for poverty alleviation introduces the basic concepts of a gis it also demonstrates how to organize geographic and nongeographic data in addition it presents different methods for using the data of the household income and expenditure survey together with other surveys and the population census to provide estimates for the standard of living and the incidence of poverty incidence in different geographical areas of a country ultimately these estimates should be used to establish guidelines for targeting poverty alleviation projects this publication illustrates different gis applications for identifying the project s target population determining the project s spatial sphere of influence or deciding where to locate public facilities this publication is of
