## **VA research : protections for human subjects need to be strengthened : report to congressional requesters 2004**

debates on the ethics of human subjects research meet with an increasing interest both within the medical profession and the broader public frequently historical arguments are used to propagate or attack certain positions within these debates however there is a tendency to oversimplify the complexities of the past for present day purposes and at the same time a lack of awareness of the historical dimension implicit in today's value preferences twentieth century ethics of human subjects research brings together leading historians of medicine to reconstruct and analyse the history of actual experimental practices the debates on human subjects research and the attempts to regulate such research during the twentieth century the volume addresses cases of medical research in france britain israel the united states and germany including the nazi period the major developments of ethical debates in these and further national contexts such as the soviet union the czech republic and japan it also explores religious views catholic jewish on human experimentation and the origins and contexts of international codes and declarations volker roelckes uberblick uber die geschichte der menschenversuche im dritten reich sei jedem empfohlen der sich kurz und pragnant uber dieses dustere kapitel deutscher geschichte informieren mochte faz

## **Twentieth century ethics of human subjects research 2001**

for an increasing number of hospitals and universities the institutional review board lrb has become a way of life spurred into existence by public outcries about the unethical nature of certain modern scientific experiments the irb represents the most visible evidence of institutional commitment to ethical review of clinical research however this exponential growth of irb activities has not occurred without growing pains like the environmental protection agency irbs have had to develop procedures and standards without a clear consensus as to what would be optimal for science and society each irb has perforce devised its own modus operandi subject to general principles and guidelines laid down by others but still relatively free to stipulate the details of its functioning thus one can applaud the general idea as well as the overall performance of irbs without asserting that the millenium has arrived the composition philosophy efficiency responsibilities and powers of irbs remain topics suit able for debate

it is still possible and appropriate for irb members to worry both about the propriety of their decisions and the personal costs of their service

## **Human Subject Medical Research 2001**

experts from different disciplines offer novel ideas for improving research oversight and protection of human subjects the current framework for the regulation of human subjects research emerged largely in reaction to the horrors of nazi human experimentation revealed at the nuremburg trials and the tuskegee syphilis study conducted by u s government researchers from 1932 to 1972 this framework combining elements of paternalism with efforts to preserve individual autonomy has remained fundamentally unchanged for decades yet as this book documents it has significant flaws including its potential to burden important research overprotect some subjects and inadequately protect others generate inconsistent results and lag behind developments in how research is conducted invigorated by the u s government s first steps toward change in over twenty years human subjects research regulation brings together the leading thinkers in this field from ethics law medicine and public policy to discuss how to make the system better the result is a collection of novel ideas some incremental some radical for the future of research oversight and human subject protection after reviewing the history of u s research regulations the contributors consider such topics as risk based regulation research involving vulnerable populations including military personnel children and prisoners the relationships among subjects investigators sponsors and institutional review boards privacy especially regarding biospecimens and tissue banking and the possibility of fundamental paradigm shifts contributors adam braddock alexander morgan capron ellen wright clayton i glenn cohen susan cox amy l davis hilary eckert barbara j evans nir eyal heidi li feldman benjamin fombonne elisa a hurley ana s iltis gail h javitt greg koski nicole lockhart holly fernandez lynch michael mcdonald michelle n meyer osagie k obasogie efthimios parasidis govind persad rosamond rhodes suzanne m rivera zachary m schrag seema k shah jeffrey skopek laura stark patrick taylor anne townsend carol weil brett a williams leslie e wolf

## **Human Subject Research Protections 2013-11-11**

media literacy is often focused on evaluating the message rather than reflecting on the medium bringing together postphenomenology media ecology posthumanism and complexity theory richard lewis s book offers

a method for such a reflection and shows how our everyday media environments constitute us as post human subjects one that is becoming and constitutes through relations also with our media technologies an original interdisciplinary effort including for example the term intrasubjective mediation and a must read book for everyone interested in how we become with and through technologies prof mark coeckelbergh university of vienna technology media literacy and the human subject is a clearly and concisely written book that employs a fruitful transdisciplinary approach it at once offers an excellent grounding in the literature whilst simultaneously developing a useful tool for students to reflect deeply and critically upon their own engagement with media thoroughly recommended alexander thomas university of east london what does it mean to be media literate in today s world how are we transformed by the many media infrastructures around us we are immersed in a world mediated by information and communication technologies icts from hardware like smartphones smartwatches and home assistants to software like facebook instagram twitter and snapchat our lives have become a complex interconnected network of relations scholarship on media literacy has tended to focus on developing the skills to access analyze evaluate and create media messages without considering or weighing the impact of the technological medium how it enables and constrains both messages and media users additionally there is often little attention paid to the broader context of interrelations which affect our engagement with media technologies this book addresses these issues by providing a transdisciplinary method that allows for both practical and theoretical analyses of media investigations informed by postphenomenology media ecology philosophical posthumanism and complexity theory the author proposes both a framework and a pragmatic instrument for understanding the multiplicity of relations that all contribute to how we affect and are affected by our relations with media technology the author argues persuasively that the increased awareness provided by this posthuman approach affords us a greater chance for reclaiming some of our agency and provides a sound foundation upon which we can then judge our media relations this book will be an indispensable tool for educators in media literacy and media studies as well as academics in philosophy of technology media and communication studies and the post humanities

the papers included in this book were presented at the baltimore conference on ethics in 1995 the purpose of this conference was to bring together ethicists psychiatrists researchers family members consumers and representatives of government industry and academia to discuss the following issues

history and ethics of neurobiological research with human subjects current practices informed consent government oversight institutional review boards and the patient and family perspective over the past 40 years there has been a significant increase in research on neurobiological disorders for basic scientific knowledge and to develop new treatment therapies this has led to significant advances in the treatment of schizophrenia manic depression and other disorders which have improved the lives of thousands public attention has been raised recently over the potential vulnerability of patients with neurobiological disorders who participate in such research since these patients often s

## ***Human Subjects Research Regulation 2021-06-03***

millions of americans enroll in clinical studies of experimental drugs and medical devices each year the hhs and the fda are responsible for overseeing independent institutional review boards irb which review and monitor human subjects research with the intended purpose of protecting the rights and welfare of the research subjects kutz investigated 3 key aspects of the irb system 1 the process for estab an irb 2 the process through which researchers wishing to apply for fed funding assure hhs their human subjects research activities follow ethical principles and fed reg and 3 the process that medical research co follow to get approval for conducting research on human subjects

## ***Technology, Media Literacy, and the Human Subject 1996-08-01***

the use of human subjects in biomedical research has increased rapidly with scientific discoveries however the failure to achieve the highest or even adequate standards of professional moral concern and behavior is a serious side effect research on human subjects is based on four years of intensive research in which two studies were completed one on a nationally representative sample of biomedical research institutions the second on a sample of 350 researchers who actually used human subjects the authors explore prevalent ethical norms the actual ethical behavior of scientists and the dilemma between the values of humane therapy and scientific discovery they document the inadequate training that biomedical researchers receive in the ethics of research on human subjects not only in medical schools but in post graduate training as well this landmark work makes very specific suggestions for policy change and reform for the biomedical research profession and its employment of human subjects

## **Ethics in Neurobiological Research with Human Subjects 2009-11**

this book provides a set of teaching materials that could be used in an academic course on human subject research in a broad range of professional school settings in developing these materials the authors were mindful that their readers would include tomorrow s advisers managers and regulators of researchers and research institutions if students are to be effective in these roles they must not only understand the history of human subject protection and the relevant ethical and regulatory issues they must begin to think critically about the existing regulatory system and to consider the desirability of policy reform this book is largely comprised of primary source documents including governmental regulations guidance statements and court decisions and excerpts from the voluminous commentary produced by scholars advisory commissions and others these materials are accompanied by extensive notes and questions which expand on some of the issues raised in the primary readings and ask the reader to think about the gaps ambiguities and conflicts those materials raise

## **Human Subjects Research: Undercover Tests Show the Institutional Review Board System Is Vulnerable to Unethical Manipulation** **2018-04-24**

this brief introduces engineers to the main principles in ethics research design statistics and publishing of human subject research in recent years engineering has become strongly connected to disciplines such as biology medicine and psychology often engineers and engineering students are expected to perform human subject research typical human subject research topics conducted by engineers include human computer interaction e g evaluating the usability of software exoskeletons virtual reality teleoperation modelling of human behaviour and decision making often within the framework of big data research product evaluation biometrics behavioural tracking e g of work and travel patterns or mobile phone use transport and planning e g an analysis of flows or safety issues etc thus it can be said that knowledge on how to do human subject research is indispensable for a substantial portion of engineers engineers are generally well trained in calculus and mechanics but may lack the appropriate knowledge on how to do research with human participants in order to do high quality human subject research in an ethical manner several guidelines have to be followed and pitfalls have to be avoided this book

discusses these guidelines and pitfalls the aim is to prepare engineers and engineering students to carry out independent research in a responsible manner

## **Research on Human Subjects 1981**

media headlines about research misconduct in american universities have focused public attention on the dramatic ethical problems that can arise during the conduct of research in the current atmosphere of accountability scientific research on humans is now under increased scrutiny by the media congress and the public ethics of the use of human subjects in research fills the need for learning materials and strategies providing support for training programs related to the ethics of the use of human subjects in research it presents a practical introduction to the ethical issues at stake in the conduct of research with human subjects beginning with a chapter on research ethics a total of 10 chapters range in scope from the development of a protocol for ethical decision making to how to obtain irb approval with an emphasis on ethical factors underpinning the irb process

## **Protecting Human Subjects 2002**

the subject of human rights is the first book to systematically address the human part of human rights drawing on the finest thinking in political theory cultural studies history law anthropology and literary studies this volume examines how human rights as discourse law and practice shape how we understand humanity and human beings it asks how the humanness that the human rights idea seeks to protect and promote is experienced the essays in this volume consider how human rights norms and practices affect the way we relate to ourselves to other people and to the nonhuman world they investigate what kinds of institutions and actors are subjected to human rights and are charged with respecting their demands and realizing their aspirations and they explore how human rights shape and even create the very subjects they seek to protect through critical reflection on these issues the subject of human rights suggests ways in which we might reimagine the relationship between human rights and subjectivity with a view to benefiting human rights and subjects alike

## **Protecting Human Subjects in Research 1994**

evaluates the dept of health and human services oversight of sponsor and investigator efforts to recruit human subjects for industry sponsored clinical trials ct it focuses on industry sponsored ct because in recent years industry sponsors have assumed a more prominent role in the search for new drugs sponsors and investigators are facing increasing difficulty finding enough subjects in a timely manner to bring drugs to market within their desired time frame this report explains the recruitment practices used in industry sponsored ct for investigational drugs identifies major concerns about them and addresses the extent and type of oversight undertaken by institutional review boards and the fda and the nih

## **Human Subjects Research 2005**

human research serves to ensure the safety of new medicines establish tolerable exposure levels for environmental and workplace hazards and determine the effectiveness of new interventions in public health education and countless other fields without volunteers these studies would be impossible to conduct recognizing society s responsibility to protect human subjects of research from avoidable harm and unethical treatment president barack obama asked the presidential commission for the study of bioethical issues the commission to conduct a thorough review of current regulations and international standards to assess whether they adequately protect human subjects in federally supported scientific studies no matter where they occur the commission s review confirmed that the federal government supports a diverse and wide ranging portfolio of research which includes activities funded directly or by award or sub award throughout the world support for medical and public health research predominates but the federal government also supports a large volume of human subjects research in other fields including social and behavioral sciences and education

## **Answers to Questions Concerning Protection of Human Subjects when Involved in Clinical Trials Research of the National Cancer Institute Through the Community Clinical Oncology Program (CCOP) 2017-05-30**

from a leading constitutional scholar an important study of a powerful mode of government control the offer of money and other privileges to secure submission to unconstitutional power the federal government increasingly regulates by using money and other benefits to induce private parties and states to submit to its conditions it thereby enjoys a formidable power which sidesteps a wide range of constitutional and political limits conditions are conventionally understood as a somewhat technical problem of unconstitutional conditions those that threaten constitutional rights but at stake is something much broader and more interesting with a growing ability to offer vast sums of money and invaluable privileges such as licenses and reduced sentences the federal government increasingly regulates by placing conditions on its generosity in this way it departs not only from the constitution s rights but also from its avenues of binding power thereby securing submission to conditions that regulate that defeat state laws that commandeer and reconfigure state governments that extort and even that turn private and state institutions into regulatory agents the problem is expansive including almost the full range of governance conditions need to be recognized as a new mode of power an irregular pathway by which government induces americans to submit to a wide range of unconstitutional arrangements purchasing submission is the first book to recognize this problem it explores the danger in depth and suggests how it can be redressed with familiar and practicable legal tools

## **Human Subject Research for Engineers 1996**

the world health report 2012 the biannual flagship report of the world health organization focuses for the first time in its history on the theme of research for better health decisions on healthcare are still made without a solid grounding in research evidence and an impetus is required for this state of affairs to change aimed at ministers of health the report provides new ideas innovative thinking and pragmatic advice on how to strengthen health research systems who and plos have launched an initiative to encourage researchers to complement and substantiate the key messages in world health report 2012 by creating a special who plos collection plos invited the submission of papers especially from low and

middle income countries on topics related to strengthening of key functions and components of national health research systems the world health report 2012 focuses on eight specific areas discussed in the editorial within the theme of no health without research we highlight below some examples of articles previously published in plos journals in these specific areas of interest now imedpub brings this collection to you within a book

## ***Current Issues in Human Subject Protection 2021-03-05***

this thought provoking study examines the ethical legal and social problems that arise with cutting edge medical technology using as examples four powerful and largely unregulated technologies off label use of drugs innovative surgery assisted reproduction and neuroimaging margaret l eaton and donald kennedy illustrate the difficult challenges faced by clinicians researchers and policy makers who seek to advance the frontiers of medicine safely and responsibly supported by medical history and case studies and drawing on reports from dozens of experts the authors address important practical ethical and policy issues they consider topics such as the responsible introduction of new medical products and services the importance of patient consent the extent of the duty to mitigate harm and the responsibility to facilitate access to new medical therapies this work s insights into the nature and consequences of medical innovation contribute to the national debate on how best to protect patients while fostering innovation and securing benefits

## **Ethics of the Use of Human Subjects in Research 1977**

advances in our understanding of the brain and rapid advances in the medical practice of neurology are creating questions and concerns from an ethical and legal perspective ethical and legal issues in neurology provides a detailed review of various general aspects of neuroethics and contains chapters dealing with a vast array of specific issues such as the role of religion the ethics of invasive neuroscience research and the impact of potential misconduct in neurologic practice the book focuses particular attention on problems related to palliative care euthanasia dementia and neurogenetic disorders and concludes with examinations of consciousness personal identity and the definition of death this volume focuses on practices not only in north america but also in europe and the developing world it is a useful resource for all neuroscience and neurology professionals researchers students scholars

practicing clinical neurologists mental health professionals and psychiatrists a comprehensive introduction and reference on neuroethics includes coverage of how best to understand the ethics and legal aspects of dementia palliative care euthanasia and neurogenetic disorders brings clarity to issues regarding ethics and legal responsibilities in the age of rapidly evolving brain science and related clinical practice

## ***Biological Testing Involving Human Subjects by the Department of Defense, 1977 2020-09-22***

using a novel approach to consider the available literature and research this book focuses on the psychology of social media based on the assumption that the experience of being in a social media has an impact on both our identity and social relationships in order to be online an individual has to create an online presence they have to share information about themselves online this online self is presented in different ways with diverse goals and aims in order to engage in different social media activities and to achieve desired outcomes whilst this may not be a real physical presence that physicality is becoming increasingly replicated through photos video and ever evolving ways of defining and describing the self online moreover individuals are using both pc based and mobile based social media as well as increasingly making use of photo and video editing tools to carefully craft and manipulate their online self this book therefore explores current debates in cyberpsychology drawing on the most up to date theories and research to explore four main aspects of the social media experience communication identity presence and relationships in doing so it considers the interplay of different areas of psychological research with current technological and security insight into how individuals create manipulate and maintain their online identity and relationships the social media are therefore at the core of every chapter with the common thread throughout being the very unique approach to considering diverse and varied online behaviours that may not have been thus far considered from this perspective it covers a broad range of both positive and negative behaviours that have now become integrated into the daily lives of many westernised country s internet users giving it an appeal to both scholarly and industry readers alike

## **The Subject of Human Rights 1980**

principles of research design and drug literature evaluation is a unique resource that provides a balanced approach covering critical elements of clinical research biostatistical principles and scientific literature evaluation techniques for evidence based medicine this accessible text provides comprehensive course content that meets and exceeds the curriculum standards set by the accreditation council for pharmacy education acpe written by expert authors specializing in pharmacy practice and research this valuable text will provide pharmacy students and practitioners with a thorough understanding of the principles and practices of drug literature evaluation with a strong grounding in research and biostatistical principles principles of research design and drug literature evaluation is an ideal foundation for professional pharmacy students and a key resource for pharmacy residents research fellows practitioners and clinical researchers features chapter pedagogy learning objectives review questions references and online resources instructor resources powerpoint presentations test bank and an answer key student resources a navigate companion website including crossword puzzles interactive flash cards interactive glossary matching questions and links from the foreword this book was designed to provide and encourage practitioner s development and use of critical drug information evaluation skills through a deeper understanding of the foundational principles of study design and statistical methods because guidance on how a study s limited findings should not be used is rare practitioners must understand and evaluate for themselves the veracity and implications of the inherently limited primary literature findings they use as sources of drug information to make evidence based decisions together with their patients the editors organized the book into three supporting sections to meet their pedagogical goals and address practitioners needs in translating research into practice thanks to the editors authors and content of this book you can now be more prepared than ever before for translating research into practice l douglas ried phd fapha editor in chief emeritus journal of the american pharmacists association professor and associate dean for academic affairs college of pharmacy university of texas at tyler tyler texas
