complex philosophic ideas such as the nature of reality the nature of the mind and the cosmic laws enshrined in the vedic and post vedic texts as a teacher with 20 years of experience the author presents ancient wisdom in simple language many books have been written about hinduism many of them incomplete and confusing this book will appeal to those seeking an easy to read logical approach to both understanding and teaching hinduism the book will be useful to parents grandparents teachers and students alike genomic selection gs has been the most prominent topic in breeding science in the last two decades the continued interest is promoted by its huge potential impact on the efficiency of breeding predicting a breeding value based on molecular markers and phenotypic values of relatives may be used to manipulate three parameters of the breeder s equation first the accuracy of the selection may be improved by predicting the genetic value more reliably when considering the records of relatives and the realized genomic relationship secondly genotyping and predicting may be more cost effective than comprehensive phenotyping resources can instead be allocated to increasing population sizes and selection intensity the third probably most important factor is time as shown in dairy cattle breeding reducing cycle time by crossing selection candidates earlier may have the strongest impact on selection gain many different prediction models have been used and different ways of using predicted values in a breeding program have been explored we would like to address the questions i how did gs change breeding schemes of different crops in the last 20 years ii what was the impact on realized selection gain iii what would be the best structure of a crop specific breeding scheme to exploit the full potential of gs iv what is the potential of hybrid prediction epistasis effect models deep learning methods and other extensions of the standard prediction of additive effects v what are the long term effects of gs vi can predictive breeding approaches also be used to harness genetic resources from germplasm banks in a more efficient way to adapt current germplasm to new environmental challenges this research topic welcomes submissions of original research papers opinions perspectives reviews and mini reviews related to these themes 1 genomic selection statistical methodology 2 the optimal use of gs in breeding schemes 3 practical experiences with gs selection gain long term effects negative side effects 4 predictive approaches to harness genetic resources concerning point 1 if an original research paper compares different methods empirically without theoretical considerations on when one or the other method should be better the methods should be compared with at least five

different data sets the data sets should differ either in crop genotyping method or its source for instance from a breeding program or gene bank accessions concerning point 2 manuscripts addressing the use of gs in breeding schemes should illustrate breeding schemes that are run in practice general ideas about schemes that may be run in the future may be considered as perspective articles
