this book was created to direct readers the right way of installing different types of air conditioning units cooling equipment is necessary equipment needed by humans with the ever warming temperature and increasing humidity of the environment installing air conditioning units at home and at work area is vital to productivity the history of air cooling systems is mentioned in the first chapter where it was mentioned that it originated from the ancient egypt ancient romans followed what the egyptians started while the persians continued then trend it was not until an american engineer developed the model of the modern units we use today chapter two of how to install air conditioning in house defines what air conditioning is all about it tells the difference of personal comfort and industrial applications industrial air conditioning usually requires better precision about temperature humidity and moisture control some applications also demand a high degree of filtering and removal of contaminants in chapter three it talks about how an air conditioning unit works while most of us consider air conditioning as associated with cold it is basically a concept of transfer of heat more technically known as heat convection an indoor unit absorbs more heat thus cool air is what is left behind in the succeeding chapters the different types of air conditioning systems are thoroughly specified as well as their advantages and disadvantages in using them there are health concerns that must be looked upon because many families are unaware about these health issues that might affect every user chapter eight would tell the reader that an air conditioning system is installed inside a particular room most especially when running a business ac system is one important thing to invest for it must be included in the list of expenses because working areas when humid affect the productivity of your personnel how to install air conditioning in house also specifies the three key parts of an air conditioning unit namely the compressor the condenser and the evaporator every unit s compressor and condenser are seen as the outer part of the unit while the evaporator is the one located in the room when these three major parts work they create the processes of enthalpy fluid pressure and the dissipation of heat as the process happens heat is always extracted and removed this particular heat is responsible in the separation and distinction of liquid from gas the author is totally in high spirits in creating this book as guide to installing a cooling system the book also includes the advantages or benefits one can get once an air conditioning unit is installed it also illustrates the reasons why installing a cooling system is very important

this book not only speaks of reducing energy proportion with respect to varying production levels but also asserts that this is wake up call to the textile mills to overlap your maintenance practices from time and safety based practices to the condition monitoring predictive maintenance based practices in your workings of production and utility machines many mills can still achieve the low hanging fruits in energy conservation in their premises and this book will facilitate the implementation of the same the book has many case studies on how mills that have already done the low cost energy conservation measures and how the same energy savings can be implemented in your textile mills now
