Orthodontics in the Vertical Dimension: A New Multidisciplinary Look at GLBT Parenting

Over the past 30 years, research on gay and lesbian parents has produced findings that challenge deeply rooted beliefs in child psychology about the processes through which parents influence the development of their children. Gay and lesbian parenting: new directions builds on this important research with a detailed multidisciplinary examination of established knowledge and emerging information, in addition to evaluating already substantiated findings. This innovative collection marks a turning point in the field by showcasing a new wave of research that examines the dynamics of same-sex parenting and addresses questions about newly emerging concerns, such as the consequences of different routes to same-sex parenthood and the effects of social perceptions on gay and lesbian family life.
