100 Questions & Answers about Bone Marrow and Stem Cell Transplantation

2003-06

this text is a patient oriented guide for patients and family of patients under going bone marrow or stem cell transplantation the questions and answers cover basic topics including background information transplant logistics screening the emotional and physical challenges associated with transplants and explanation of the procedure itself and post transplant care information the authors are a bone marrow transplant recipient and a hematologist oncologist who team up to provide both a doctor s and a patient s perspective in answering these common questions

Dental Implants and Bone Grafts Materials and Biological Issues

2019-10-15

dental implants and bone grafts materials and biological issues brings together cutting edge research to provide detailed coverage of biomaterials for alveolar bone replacement and reconstruction enabling scientists and clinicians to gain a thorough knowledge of advances and applications in this field as tooth loss and alveolar bony defects are common and pose a significant health problem in dental clinics this book deals with timely topics including alveolar bone structures and properties mechanical function pathological changes material issues reviews of biomaterials and tissue engineering for dental implants design and surface modification biological interaction and biocompatibility of dental implants and new frontiers this book is a highly valuable resource for scientists clinicians and implantologists interested in the complex alveolar bone system and biomaterial and regenerative strategies for its reconstruction focuses on the structure function and pathology of alveolar bone system considers the issues involved in selecting alveolar bone biomaterials dental implants and bone grafts discusses the requirements for optimal dental implant osseointegration and alveolar bone replacements reconstruction explains the biological basis of interactions between alveolar bone and biomaterials

100 Questions about the Human Body

2019

how do bones grow what happens when we re sick why do we fart curious minds can find the answers to these questions and over 90 more in this kid friendly tour of the human body explore each of our body s most important organ systems how organs work and more through fun questions and answers illustrated with colorful and sometimes slightly gross artwork jokes sprinkled throughout are sure to tickle your child s funny bone packed with fun and fascinating facts quirky colorful format question and answer format breaks down information into manageable chunks informal kid friendly language is breezy and fun sturdy hardcover binding book measures 6 wide x 9 high 48 pages ages 7 and up

this book offers a timely snapshot of computational methods applied to the study of bone tissue the bone a living tissue undergoing constant changes responds to chemical and mechanical stimuli in order to maximize its mechanical performance merging perspectives from the biomedical and the engineering science fields the book offers some insights into the overall behavior of this complex biological tissue it covers three main areas biological characterization of bone tissue bone remodeling algorithms and numerical simulation of bone tissue and adjacent structures written by clinicians and researchers and including both review chapters and original research the book offers an overview of the state of the art in computational mechanics of bone tissue as well as a good balance of biological and engineering methods for bone tissue analysis an up to date resource for mechanical and biomedical engineers seeking new ideas it also promotes interdisciplinary collaborations to advance research in the field

annotation most of the morbidity and mortality associated with malignant disease arise from metastases rather than primary tumors patients with advanced breast or prostate cancers usually develop bone metastases at the time of death the skeleton often bears the bulk of their tumor burden this book covers the latest advances in understanding the molecular mechanisms underlying the pathophysiology of bone metastasis that are now driving the development of new therapeutic strategies as exemplified by the successful use of bisphosphonates for metastatic bone disease

the human skeleton undergoes a life long remodeling process bone homeostasis requires a potential balance between bone resorbing osteoclasts and bone forming osteoblasts with old age bone homeostasis undergoes deregulation and normal bone remodeling could not make bone mass stable thus causing osteopenia and osteoporosis osteoporosis is a systemic bone disease characterized by reduced bone mass degraded bone microstructure increased bone fragility and raised risk of fracture osteoporosis is a frequently occurring and common disease in the aging population especially in postmenopausal women and elderly men the updated research found that one third of women aged 60 to 70 suffer from osteoporosis two thirds of women aged 80 years or older have osteoporosis about 20 25 of women over 50 years of age have one or more vertebral fractures recent research evidence indicates that an increasing number of plant based natural products or secondary metabolites such as polyunsaturated fatty acids phytosterols flavonoids and other botanicals active compounds have beneficial effects on the risk of osteoporosis compared with conventional therapies plant based natural products with thousands of years of medical use experience are gradually approved for clinical use due to fewer adverse reactions low toxicity high efficiency and good tolerance natural products have been an important source of inspiration for new drug development however most of the evidence regarding the anti osteoporosis effects of natural products comes from in vitro and preclinical in vivo studies and only a few natural products have been used clinically all of these above mentioned still require rigorously designed studies and further verification
