insights into cardiovascular diseases many transgenic animal models have been recently developed and characterized currently more than 90 percent of all laboratory animal experiments are conducted in mice and rats although there are many scientific advantages to using small animal models it has been recently recognized that many exciting therapeutic targets identified in small animals are not validated in clinical trials in patients thus suitable large animal models particularly under conscious state with appropriate direct measurements of cardiovascular function are needed to serve as a better translational bridge between preclinical and clinical studies in this chapter we primarily focus on surgically instrumented large animal models of common cardiovascular disease studied in the conscious state in addition several important physiological factors that influence the characteristics of the models as well as the importance of proper data interpretation will also be discussed in
