this book exposes the attempt to teach atheistic evolution to students often ridiculing their faith in god the classrooms in our schools have become the battlegrounds for the minds of our children since the introduction of evolution by charles darwin there has been a growing list of atheist professors who vigorously fight any religion the classrooms of america should not be the battlegrounds of any religion but evolution is a religion it has no place in the classroom since it does not offer any information that improves the teaching of any science class except evolution itself there is no proof of evolution only assertions innuendos credulity belief without proof and suppositions fully one third of all geology textbooks deal with evolution which is founded only opinion and undocumented assertions therefore it should be removed from all textbooks dr david menton who taught medicine at the washington school of medicine in st louis missouri for twenty five years stated that he never once needed to reference evolution in any medical class a coalition of organizations such as the national academy of sciences whose members are 93 atheist or agnostic and the national center for science and education control most of the government grants intended for schools use fully support the atheism of evolution and they attack any criticism of evolution this book provides a chronological introduction to the science of motion and rest based on the reading and analysis of significant portions of galileo s dialogues concerning two new sciences pascal s treatise on the equilibrium of fluids and the weight of the mass of air newton s mathematical principles of natural philosophy and einstein s relativity each chapter begins with a short introduction followed by a reading selection carefully crafted study questions draw out key points in the text and focus the reader s attention on the author s methods analysis and conclusions numerical and laboratory exercises at the end of each chapter test the reader s ability to understand and apply key concepts from the text space time and motion is the second of four volumes in a student s guide through the great physics texts this book grew out of a four semester undergraduate physics curriculum designed to encourage a critical and circumspect approach to natural science while at the same time preparing students for advanced coursework in physics this book is particularly suitable as a college level textbook for students of the natural sciences history or philosophy it also serves as a textbook for advanced high school students or as a thematically organized source book for scholars and motivated lay readers in studying the classic scientific texts included herein the reader will be drawn toward a lifetime of contemplation choosing the right college is a big decision for most people american indian and alaska natives are no exception but finding a college that offers a good educational program in their major plus a strong support system for tribal traditions makes that decision even more complex this volume will help native people clarify their postsecondary aspirations improve their college choice and increase their success in college after a thorough examination of the issues that should be considered pavel and inglebret present the different types of colleges available programs and services to meet the special needs of native students and financial aid options by answering many of the basic questions students have about going to college pavel and inglebret help to demystify the process and encourage more native students to pursue a college education special features include a list of colleges with native american studies and those most friendly to native americans needs a list of sources for financial aid with contact information interviews with native american students on all aspects of their college experiences suggestions for students on how to balance their new college experiences with their community and heritage shortlisted for the british psychological society book award 2013 social neuroscience is an expanding field which by investigating the neural mechanisms that inform our behavior explains our ability to recognize understand and interact with others concepts such as trust revenge empathy prejudice and love are now being explored and unraveled by the methods of neuroscience many researchers believe that evolutionary expansion of the primate and human brain was driven by the need to deal with social complexity not only to understand and outwit our peers but to take advantage of the benefits of cooperative living but what kind of brain based mechanisms did we end up with special routines for dealing with social problems or more general solutions that can be used for non social cognition too how are we able to sacrifice our own self interests to respond to the needs

of others how do cultural differences in the organization of society shape individual minds and brains and does the brain provide constraints on the possible range of cultural permutations the student's guide to social neuroscience explores and explains these big issues using accessible examples from contemporary research the first book of its kind this engaging and cutting edge text is an ideal introduction to the methods and concepts of social neuroscience for undergraduate and postgraduate students in fields such as psychology and neuroscience each chapter is richly illustrated in
