a thorough and hard hitting critique that is a must read for anyone interested in the interaction between religion and science it has become the prevalent view among sociologists historians and some theistic scientists that religion and science have never been in serious conflict some even claim that christianity was responsible for the development of science in a sweeping historical survey that begins with ancient greek science and proceeds through the renaissance and enlightenment to contemporary advances in physics and cosmology stenger makes a convincing case that not only is this conclusion false but christianity actually held back the progress of science for one thousand years it is significant he notes that the scientific revolution of the seventeenth century occurred only after the revolts against established ecclesiastic authorities in the renaissance and reformation opened up new avenues of thought the author goes on to detail how religion and science are fundamentally incompatible in several areas the origin of the universe and its physical parameters the origin of complexity holism versus reductionism the nature of mind and consciousness and the source of morality in the end stenger is most troubled by the negative influence that organized religion often exerts on politics and society he points out antiscientific attitudes embedded in popular religion that are being used to suppress scientific results on issues of global importance such as overpopulation and environmental degradation when religion fosters disrespect for science it threatens the generations of humanity that will follow ours

like anywhere else the present day islamic world too is grappling with modernity and postmodernity secularisation and globalisation muslims are raising questions about religious representations and authority this has given rise to the emergence of alternative islamic discourses which challenge binary oppositions and dichotomies of orthodoxy and heterodoxy continuity and change state and civil society it also leads to a dispersal of authority a collapse of existing hierarchical structures and gender roles this book further argues that the centre of gravity of many of these alternative islamic discourses is shifting from the arabic speaking heartland towards the geographical peripheries of the muslim world and expatriate muslims in north america and europe at the same time in view of recent seismic shifts in the political

constellation of the middle east the trends discussed in this book hold important clues for the possible direction of future developments in that volatile part of the muslim world
