Toxicity: 77 Must-Know Predictions of Organic Compounds

2023-10-04

due to the advances of various methods for the prediction of toxicity of organic compounds and ionic liquids ils it is necessary to review these methods for scientists and students it is essential to compare the advantages and shortcomings of these methods since many organic compounds and ils are synthesized each year this book introduces suitable models for the assessment of their toxicities this book reviews the best predictive methods for the prediction of toxicity of organic compounds and ils which were derived by in vitro or in vivo experiments different available quantitative structure toxicity relationship qstr models based on various descriptors have been discussed to predict toxicity parameters such as ld50 50 lethal dose ec50 the concentration of the desired il that produces mortality of 50 percent of the bacterial population and log igc50 1 logarithm of 50 growth inhibitory concentration of t pyriformis of various classes of organic compounds and ils the reliability of these methods is compared and discussed each chapter contains some complimentary problems with their answers which can improve the experience of students and researchers the introduced subjects are suitable for advanced students in chemistry biochemistry medicinal chemistry and chemical engineering

Handbook Of Immunological Properties Of Engineered Nanomaterials (Second Edition) (In 3 Volumes)

2016-01-28

this unique book provides comprehensive overview of the field of immunology related to engineered

nanomaterials used for biomedical applications it contains literature review case studies and protocols the book can serve as a source of information about nanoimmunotoxicology for both junior scientists and experts in the field the authors have more than 10 years of experience with preclinical characterization of engineered nanomaterials used for medical applications and they share their experience with the readers in addition the international team of experts in the field provides the opinion and share the expertise on individual topics related to nanoparticle physicochemical characterization hematocompatibility and effects on the immune cell function the second edition contains updated chapters from the first edition plus new chapters covering areas of tumor immunology nanoparticle interaction with lymphatic system mathematical modeling of protein corona utilization of nanoparticles for the delivery of antiviral drugs extensive analysis of nanoparticle anti inflammatory and immunosuppressive properties novel ways of protecting therapeutic nanoparticles from the immune recognition as well as case studies regarding nanoparticle sterilization complement activation protein binding and immunotherapy of cancer the second edition comes in 3 volumes volume 1 is focused on nanoparticle characterization sterility and sterilization pyrogen contamination and depyrigenation it also contains overview of regulatory guidelines protocols for in vitro and in vivo immunotoxicity studies and correlation between in vitro and in vivo immunoassays volume 2 is focused on hematocompatibility of nanomaterials it provides comprehensive review and protocols for investigating nanoparticle interaction with erythrocytes platelets endothelial cells plasma coagulation factors and plasma proteins forming so called corona around nanoparticles volume 3 is dedicated to nanoparticle interaction with and effects on the immune cell function it also contains examples of nanoparticle use for delivery of antiviral and anti inflammatory drugs

Colour and the Optical Properties of Materials

2020-03-09

the updated third edition of the only textbook on colour the revised third edition of colour and the optical properties of materials focuses on the ways that colour is produced both in the natural world and in a wide range of applications the expert author offers an introduction to the science underlying colour and optics and explores many of the most recent applications the text is divided into three main sections behaviour of light in homogeneous media which can largely be explained by classical wave optics the way in which light interacts with atoms or molecules which must be explained mainly in terms of photons and the interaction of light with insulators semiconductors and metals in which the band structure notions are of primary concern the updated third edition retains the proven concepts outlined in the previous editions and contains information on the significant developments in the field with many figures redrawn and new material added the text contains new or extended sections on photonic crystals holograms flat lenses super resolution optical microscopy and modern display technologies this important book offers and introduction to the science that underlies the everyday concept of colour reviews the cross disciplinary subjects of physics chemistry biology and materials science to link light colour and perception includes information on many modern applications such as the numerous different colour displays now available optical amplifiers lasers super resolution optical microscopy and lighting including leds and oleds contains new sections on photonic crystals holograms flat lenses super resolution optical microscopy and display technologies presents many worked examples with problems and exercises at the end of each chapter written for students in materials science physics chemistry and the biological sciences the third edition of colour and
